

Vyshnavi P
Golang Developer
Phone: 614-317-4852
Email: vyshnavip.golang@gmail.com

PROFESSIONAL SUMMARY:

- Full Stack Golang Developer with 7+ years of expertise in developing and maintaining distributed cloud-native applications using Go, React, and AWS.
- Proficient in the complete Software Development Life Cycle (SDLC), from requirements gathering and design to deployment and production support, following Agile/Scrum methodologies.
- Hands-on in building high-performance microservices, RESTful APIs, and gRPC services with Go for scalable backend systems.
- Strong in using Go routines and channels to implement concurrency and optimize processing throughput.
- Developed front-end interfaces with React, HTML5, CSS3, and integrated with Go-based APIs for dynamic and responsive user experiences.
- Proficient in CI/CD pipelines using Jenkins, GitHub Actions, and Terraform for continuous integration, deployment, and infrastructure automation.
- Extensive cloud deployment experience using AWS (EKS, ECS, Lambda, EC2, S3) and GCP (GKE, Pub/Sub) for scalable service orchestration.
- Solid database background across PostgreSQL, MySQL, Oracle, and NoSQL technologies like MongoDB, DynamoDB, and Redis.
- Knowledge in SQL performance tuning, data modeling, and query optimization for improved backend efficiency.
- Proficient in monitoring, logging, and observability with Prometheus, Grafana, CloudWatch, and ELK Stack.
- Collaborative development using JIRA, Confluence, and Swagger/OpenAPI for documentation and team coordination.
- Skilled in maintaining system reliability, performing production support, and ensuring high availability in distributed systems.

Technical Skills:

Languages	Java, Python, JavaScript, Golang, SQL, Shell
Frameworks & Libraries	Gin, Echo, Fiber, Grpc, Flask
Front-End Technologies	React.js, HTML5, CSS3, Bootstrap
Cloud Platforms	AWS(EKS, ECS, Lambda, EC2, S3, CloudWatch), GCP(GKE, Pub/Sub)
DevOps & Infrastructure Tools	Docker, Kubernetes, Helm, Terraform, Jenkins, GitHub Actions, GitLab CI
Messaging & Streaming	Apache Kafka, Rabbit MQ
Databases	MySQL, Oracle, PostgreSQL, DynamoDB, MongoDB, Redis
Monitoring	Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Datadog, AWS CloudWatch
Practices & Tools	DDD, TDD, CI/CD Pipelines, Agile/Scrum Methodology, JIRA, Confluence, Swagger/OpenAPI

PROFESSIONAL EXPERIENCE:

First Nationwide Bank, Dallas, TX

August 2023 – Present

Full Stack Golang Developer

Responsibilities:

- Developed and deployed React-based dashboards integrating with Golang RESTful APIs.
- Built scalable microservices in Go using Gin and gRPC for live content delivery and analytics.
- Used Go routines and channels to enable parallel processing of high-throughput streaming events.
- Designed and managed CI/CD pipelines in Jenkins and GitHub Actions for automated deployments.
- Deployed workloads on AWS EKS, orchestrating microservices with Helm and Terraform.
- Leveraged AWS Lambda for event-based image and media processing tasks.
- Integrated Kafka for asynchronous event delivery and inter-service data streaming.
- Utilized PostgreSQL for transactional data and Redis for session caching and queue handling.
- Tuned SQL queries and improved performance using PostgreSQL query plans and indices.
- Monitored service health with Prometheus, Grafana, and AWS CloudWatch alarms.

AT&T, Richardson, TX

November 2021 – July 2023

Golang Developer

Responsibilities:

- Designed and developed a content management system combining React front-end and Golang APIs.
- Implemented Fiber-based microservices in Go to handle content ingestion, metadata, and analytics.
- Leveraged Go routines for concurrent message consumption and asynchronous task execution.
- Configured RabbitMQ and Kafka pipelines to support real-time content publishing and updates.
- Used PostgreSQL for relational data and DynamoDB for high-volume NoSQL document storage.
- Automated backend deployments using AWS ECS, with Lambda triggers for workflow automation.
- Built CI/CD pipelines with Jenkins and Docker, integrating static code checks and Go tests.
- Provisioned AWS infrastructure with Terraform, including VPCs, ECS clusters, and load balancers.
- Deployed Redis caching layers to improve latency and offload database requests.
- Configured centralized logging and metrics using CloudWatch dashboards and Prometheus exporters.

Fifth Third Bank, Cincinnati, OH

March 2020 – October 2021

Golang Developer

Responsibilities:

- Designed and developed a content management system combining React front-end and Golang APIs.
- Implemented Fiber-based microservices in Go to handle content ingestion, metadata, and analytics.
- Leveraged Go routines for concurrent message consumption and asynchronous task execution.
- Configured RabbitMQ and Kafka pipelines to support real-time content publishing and updates.
- Used PostgreSQL for relational data and DynamoDB for high-volume NoSQL document storage.
- Automated backend deployments using AWS ECS, with Lambda triggers for workflow automation.
- Built CI/CD pipelines with Jenkins and Docker, integrating static code checks and Go tests.
- Provisioned AWS infrastructure with Terraform, including VPCs, ECS clusters, and load balancers.
- Deployed Redis caching layers to improve latency and offload database requests.

- Configured centralized logging and metrics using CloudWatch dashboards and Prometheus exporters.

John Deere, Moline, IL

December 2017 – February 2020

Golang Developer

Responsibilities:

- Designed and developed a content management system combining React front-end and Golang APIs.
- Implemented Fiber-based microservices in Go to handle content ingestion, metadata, and analytics.
- Leveraged Go routines for concurrent message consumption and asynchronous task execution.
- Configured RabbitMQ and Kafka pipelines to support real-time content publishing and updates.
- Used PostgreSQL for relational data and DynamoDB for high-volume NoSQL document storage.
- Automated backend deployments using AWS ECS, with Lambda triggers for workflow automation.
- Built CI/CD pipelines with Jenkins and Docker, integrating static code checks and Go tests.
- Provisioned AWS infrastructure with Terraform, including VPCs, ECS clusters, and load balancers.
- Deployed Redis caching layers to improve latency and offload database requests.
- Configured centralized logging and metrics using CloudWatch dashboards and Prometheus exporters.

EDUCATION:

Master's in computer science, University of North Texas
