Work experience

Jun 2020 - current time	GoLang Developer Sentara Health
Apr 2018 - Jun 2020	Full Stack Engineer Virginia Premier
Jan 2016 - Mar 2016	Infrastructure Test Lead Federal Reserve Bank of Richmond Responsibilities: • Design and develop test strategies that fully encompass the scope and objective of the test engagement • Construct a Test Plan that covers all documented requirements as well as negative/positive test cases discovered during application walkthrough/learning phase (pre-test) • Participate in product spec/design reviews to provide input on functional requirements, product designs, schedules, or potential problems regarding testability. • Develop or specify standards, methods, or procedures to determine product quality or release readiness. • Maintain documentation of test plans and their results using a test case management system. • Study the issues escalated by customers and modify the system test scripts to reproduce the issues. • Log software defects using a bug tracking system and work closely with software developers to analyze the defects and track them to resolution. • Automated test cases using the test harness; contribute to the automation framework via coding and design • End to end execution of automated scripts and test result analysis. • Construct ‘work around’ strategies for road-blocking events • Insure testing focus remains focused on the delivery of quality software while meeting agreed upon test completion dates/milestones Environment: HP Application Life Cycle Management, Selenium WebDriver, Korn Shell, Bash Shell, Eclipse IDE (Java Based)
Apr 2015 - Nov 2015	Data Analyst Capital One Responsibilities: • Involved in migrating GRC data to Prime. • Communicating with business users and analysts to gather business requirements. • Creating Scope docs and coming up with Technical design. • Merging the files using Tableau reporting tool. • Creating master LOB files after gathering the information from users. • Working on multiple LOB’s (RDB, COAF, Home Loans, US, Canada Card,..). • Preparing Fast maps using the Process Hierarchy and the LOB files. • Loading the fast maps to Sand Box and validating it against the LOB files. • Validating the Sandbox and Prod data using the SQL queries for associations. • Expertise in working with various operational sources like Oracle and Teradata. • Performance tuning the long running queries. Environment: Teradata SQL Assistance, Oracle SQL Developer, Tableau 8.3.4, MS Excel
Mar 2014 - Mar 2015	Dotnet Developer/QA BrownGreer PLC Brown Greer is a law firm devoted to multiple claims resolution and administration. Brown Greer boasts a team of seasoned software developers who work with attorneys to identify requirements of each project and then design, update and report from custom-built platforms. The applications track the litigation and claims for millions of claimants involving claims of billions of

	dollars. Responsibilities: • Involved in designing, developing & testing cross-platform mobile and web applications using Xamarin Forms and ASP.NET Web Forms. • Working closely with product managers, Business Analysts and all the developers throughout the development cycle to nail down requirements and set expectations, estimates for testing. • Developed back-end services using C#.NET and LINQ, leveraging layered architecture with decoupled modules. • Integrated RESTful APIs with JSON/XML for secure client-server communication and data transfer. • Built reusable business logic components and data access logic using ASP.NET MVC 4.0 and Entity Framework. • Preparing Test Plans, Test Scenarios and Test Cases. • Performing smoke and Functional testing on every build of application. • Performing Regression Testing to verify various sections of the system to ensure that changes or fixes in the system not only work, but also do not adversely affect the remainder of the system. • Documenting and executing Test plans and Test scripts using Jira, Quality Center for functional, and Regression Testing. • Performing back end testing in SQL Server. • Working closely with developers in debugging and fixing defects, monitoring system and database issues. • Created and deployed SSIS packages to automate data movement between Excel, Oracle, and SQL Server systems. • Used ArcGIS Esri APIs to implement mapping functionality, including layers, forms, and location services. • Preparing Test Reports at the end of the Testing Phase.
Apr 2012 - Mar 2014	QA Test Lead for Capital One Capital One Responsibilities: • Analyzed business requirements, system requirements, data mapping requirement specifications, and responsible for documenting functional requirements in Quality Center • Documented and executed Test plans and Test scripts using Quality Center for functional, integration and Regression Testing. • Involved in Testing Reports which are developed in Web Intelligence in Business Objects XI 3.1 / 4.0 BI Environments. • Validated the Business Objects Report data with Sql data. • Used SQL Join Queries to pull the data from database of Business Objects. • Created SQL scripts to run against Teradata and Oracle Databases for database testing. • Responsible for Running the Wrapper scripts in the Project path in Unix to run the job and load the Source data into the database. • Analyzed the specifications in the user Requirements Document, Functional Requirement and Technical Requirement Documents for the purpose of preparation of Test Plans. • Executed the Test Cases and verified the expected results against actual results and created the test report. • Performed unit test on the ETL processes needed to perform the required data cleansing and transformations on the data. • Used ALM (QC) to plan, design, implement, execute and evaluate the tests. • Participated in daily meetings and giving status updates and test summary report on weekly basis to the Management. • Effectively communicated to the project manager, test manager and product owner about the project test plan, test cases creation, test execution and defect statuses. • Created status report on daily basis based on test case creation and execution and submitted to Test Manager. • Coordinated the testing between onsite and offshore resources. Environment: Business Objects XI R 3.1/4.0 (Web Intelligence, Crystal Reports, Xcelsius) Teradata 12, DB2, Teradata SQL Assistant, ETL, HP Quality Center 10.0, ALM
Jan 2012 - Mar 2012	Sr. Business Objects Developer Crawford & Company Responsibilities: • Involved in gathering, analyzing, and documenting business, functional requirements and data specifications for Business Objects Universes and Reports • Creation and enhancement of Universe with classes and Objects. • Created reports using Business Objects Web Intelligence as a part of report development using XI R4.0 • Used some functionalities like traps, contexts in the universe development to resolve the loops. • Creation of different types of reports such as master/detail, cross tab and chart. Use of filters, conditions, calculations, sorts, alerters etc. • Created linked sub reports using Open Doc URLs, worked on creating complex reports, used cross-tabs to display data in grid form • Worked extensively with the major functionality of BO like Alerters, Filters, Sorts, Query Prompt and Drill Filters. • Migrated the Universe and Reports from XIR3.1 to XIR4.0 • Creating various reports with multiple data sources, dynamic cross tabs and drilldowns using WebI. • Created Weekly and Monthly scheduled jobs based on the business criteria like delivery methods, output formats etc. • Used some functionalities like Breaks and Sections in the reports. • Tuning of SQL queries for better performance. • Unit testing and testing documentation. • Experience in BOBJ implementation to post-production. • Performed migrations from different data sources to Business Objects. • Implemented both Single pass Method and Incremental Method for Migrations. • Creating technical designs for the requirements. Environment: Business Objects XI R 3.1/4.0, Web Intelligence 3.1, Teradata, Oracle 10 g.
Sep 2010 - Dec 2011	Business Objects Developer InterContinental Hotels Group (IHG®) Responsibilities: • Interacted with Business Users to understand Business Requirements and prepare the Business Requirement Documents. • Worked with Business Managers, Architects in documenting the project development work, providing estimates, creating High Level specifications. • Involved in developing, designing and maintaining new and existing universes with Classes and Objects from Oracle Database. Updated the Universe as per the changes of the Database table and coordinated with the business users. • Resolved Loops and Traps, Created complex Reports, Summary reports, Templates, Master/Detail, Cross Tab, Parameterized reports by using BO Functionalities like Slice and Dice, Drill Down, Variables, Filters, Breaks, Sections, Alerters and other features. • Used Cross-tab expert to generate aggregate (SUM, Count, MAX, MIN)

functions for a field or a column. • Created WebI reports with multiple data providers and synchronized the data using merge dimensions. • Worked extensively with the end client to understand their needs. Participate in the analysis and design of application components, contributing to the team with appropriate technology solutions for client requirements. • Created Dashboards for Visual Representation of Data using Crystal Xcelsius. • Extensively used the Import Wizard to migrate the universes, corporate documents, users and groups from the legacy BO to the XI R3.1 version. • Created complex reports using Desktop Intelligence and WebI. • Worked on Row Level Security setup in the Universe by creating restrictions at the Universe level. • Create design plan for the universes and develop the universes. Prepare the Universe development life cycle documentation which includes the detailed technical specifications. • Involved in creating the Dashboard using Xcelsius 2008. We used QaaWS queries as source to the Xcelsius dashboard. Used Live Office connector to bring the dynamic data or live data into the Xcelsius reports.

Education

2010 - 2011

Computer Engineering
2011
University of Northern Virginia - Annandale

2003 - 2007

Information Technology
Bachelors of Science
Jawaharlal Nehru Technological University

Head line

GoLang, Dotnet, Azure, Angular, React, Data Analyst, QA Analyst, BOBJ Developer

Summary

NET Framework, TFSA Server and SSRS reporting services. Have been involved in all phases of the software development life cycle using multiple different platforms including Windows and Unix. My experience includes requirements gathering, design, development, unit, integration, acceptance and performance test case scenarios writing, testing, and implementation. Excellent communication skills with experience working in a team environment as well as independently on projects and assignments. I have been in the industry for more than several years

Certifications

Node.js Essential Training
