

Aleksei Salikhov

Senior Go Backend Engineer | Distributed Systems | High- load & Event-driven Architectures | AWS, Kubernetes

Batumi

alekseisalikhovqtrmz_ebx@indeedemail.com

+995-591-16-24-47

Professional Summary

Senior Backend Engineer with 8+ years of experience designing and building scalable distributed systems. Specialized in microservices and event-driven architectures, with strong expertise in cloud-native development (AWS, Kubernetes), system design, and performance optimization. Proven track record of owning backend systems end-to-end, contributing to architectural decisions, and improving reliability in distributed environments.

Willing to relocate: Anywhere

Work Experience

Backend Developer

Tochka JSC-Remote, distributed team

December 2023 to October 2025

- Developed and scaled a high-load customer loyalty platform,
- improving system reliability and reducing operational overhead through backend optimization
- Designed and implemented an automated campaign launch system, reducing manual operations and accelerating time-to-market
- Built internal tools for promo code management, eliminating manual database operations and reducing support workload
- Designed and implemented architecture for high-load marketing campaigns with configurable logic and flexible rollout strategies
- Improved backend performance and system stability through service optimization and refactoring
- Automated internal processes and improved administrative tooling
- Contributed to system design and architectural decisions
- Mentored engineers and improved onboarding and development processes

Golang Backend Developer

One Planet Club-Remote, distributed team

March 2021 to December 2023

- Developed and scaled a distributed microservices-based platform
- Contributed to system design and architecture of services handling transactions and referral relationships
- Designed and implemented a notification and reward system to improve user engagement
- Integrated payment systems and built services for transaction processing
- Migrated legacy services (Java, Python, C++) to Go, improving system performance and maintainability
- Implemented synchronous and asynchronous communication patterns (gRPC, RabbitMQ, AWS SQS)
- Modeled referral relationships using ArangoDB (graph database)

- Designed a failover mechanism between RabbitMQ and AWS SQS, increasing system resilience.
- Contributed to infrastructure as code (Terraform), CI/CD pipelines, and Kubernetes-based deployments

Java Backend Developer

Sberbank PJSC-Moscow, Russia

September 2019 to March 2021

- Designed and implemented a scalable multi-channel notification system with reliable message delivery and tracking
- Built a reusable notification templating service to standardize communication across services and channels
- Improved service performance (~15%) through JVM tuning, business logic optimization, and data denormalization
- Collaborated with performance testing teams to analyze system load (RPS), JVM behavior, and resource usage
- Participated in architecture discussions and contributed to technical decision-making
- Maintained code quality standards during adoption of static analysis tools (SonarQube)
- Technologies: Java 11, Spring Boot, Kafka, PostgreSQL, Hibernate, Liquibase, Docker, OpenShift, Jenkins

Backend Developer

Storiesoft LLC-Orenburg, Russia

March 2018 to September 2019

- Developed backend services for fintech systems using Java (Spring Boot), contributing to API design and business logic implementation
- Built and maintained microservices for financial data processing and integrations with external payment systems
- Implemented a currency exchange rate service in Python, improving data freshness and reliability
- Contributed to a card payment processing platform using C# (.NET Core)
- Implemented metrics collection and monitoring using Prometheus
- Wrote automated tests (Selenium, Java) to improve system reliability
- Worked with containerization (Docker) and relational databases (PostgreSQL)
- Technologies: Java (Spring Boot), Python, C#, C/C++, PostgreSQL, Docker, Prometheus

Education

Software Engineering — Development of Information and Telecommunication Systems (Master's Degree)

Orengurg State University-Russia, Orenburg

August 2016 to May 2018

Software Engineering — Development of Software and Information Systems (Bachelor's Degree)

Orenburg State University-Russia, Orenburg

August 2012 to May 2016

Skills

- Microservices, Distributed Systems, Event-driven Architecture, System Design, High-load Systems, Fault-tolerant Systems, Idempotent Processing
- Kafka, RabbitMQ, AWS SQS

- Prometheus, Grafana, OpenTelemetry
- PostgreSQL, Redis, ArangoDB
- Russian
- Performance optimization
- Upper- Intermediate (B2+), working proficiency Citizenship: Russia Based in Georgia Open to relocation Go (primary), Python
- Testing (unit, integration)
- AWS, Docker, Kubernetes, Terraform, Helm
- CI/CD
- English B2
- REST, gRPC (including streaming), OAuth2/JWT
