harshithamgoth1@gmail.com

PROFESSIONAL SUMMARY

- Over 11+ years of experience in Golang and React. Excellent coding and problem - solving skills with ability to work as developer.
- IT experience in all phases of SDLC, like Requirement Analysis, Design, Development, Testing, and implementation and Python web applications.
- Expert in utilizing Vault within Golang applications for secure configuration management, ensuring sensitive data such as API keys and service credentials are stored securely and not in the codebase or configuration files.
- Skilled in implementing dynamic secrets within Golang services, using Vault to generate on-demand, time-limited database credentials, thus enhancing security through automated secret rotations.
- Modernized legacy PHP 5.x applications to PHP 8.x, improving security, performance, and compatibility with modern frameworks.
- Redesigned infrastructure for Kubernetes-based orchestration, implementing Helm charts, ConfigMaps, and autoscaling policies for fault-tolerant microservices.
- Demonstrated experience in integrating Vault's API with Golang applications, leveraging HTTP clients and custom logic to manage secrets lifecycle, including retrieval and renewal.
- Good experience with Golang drivers to perform operations such as CRUD and writing complex queries with SQL Server, PI/SQL, Mongo DB
- Worked on communication protocol like gRPC using Protocol buffer (Protobuf)
- Hands on experience in Web Application development using HTML, CSS, JavaScript, React, jQuery, AJAX and JSON.
- Reviewed and refactored existing libraries, improving test coverage and introducing CI/CD automation to increase reliability and reduce deployment errors.
- Patched and optimized open-source libraries, fixing memory leaks and enhancing performance, which improved system stability in production environments.
- Architected and maintained enterprise-scale ETL pipelines ingesting data from over 20 internal and external sources using Apache NiFi, Airflow, and custom Python jobs.
- Hands on experience with version control tools such as SVN and GitHub Experienced in handling big data systems using NoSQL DB, Cassandra & data streaming tools like Kafka in multi-data center cluster.
- Wrote the terraform scripts in Golang.
- Refactored legacy C# modules into Golang microservices, improving maintainability and enabling cloud-native deployment with Docker & Kubernetes.
- Good experience in writing SQL queries, Stored Procedures, Triggers and Functions using PL/SQL with databases like Oracle and SQL Server.
- Created internal diagnostic tools using Golang and ReactJS in order to assist with customer issues.
- Golang and Python were used as a backend REST service while ReactJS was used for the user interface.
- Developed responsive web product features using React JS, SASS, on GoLang with REST.
- Developed a Kotlin DSL-based analytic encoding system, employing metaprogramming techniques, that generates Python. Designed and developed the frontend application using Rails, CSS, AJAX and J Query.

- Having strong working experience with DevOps Skills CI/CD, Docker, Jenkins, Kubernetes
- Hands on experience in creating user stories and reports like JIRA & Snagit and working on Work Zone.
- Strong working experience in developing Restful webservice and Micro Services using Golang.
- Implemented REST services by Golang with microservices architecture.
- Good hands-on experience in designing, developing, implementing and deploying applications on cloud using AWS, Azure.
- Integrated Cypher queries into Spring Boot microservices for efficient access to relationship data in a scalable, containerized environment (Kubernetes).
- Designed database schemas with complex entity relationships. Have experience in Agile and Waterfall.
- Utilized Agile Methodologies to manage full life-cycle development of the project and involved in Business requirement phase which involved direct interaction with clients.
- Experienced in the development of distributed components using Servlets, JSP, EJB, XML, JDBC, Ajax, jQuery, Python and CSS.
- Mentored junior developers in Spring Boot best practices, unit/integration testing with JUnit and TestContainers, and architectural design patterns.
- Developed and published Power BI dashboards for executive leadership and operations teams, using DAX and Power Query for complex metric calculations and data shaping.
- Good experience in developing SQL Triggers, Stored Procedures, Functions and Views for Backend process using SQL Server.
- Excellent experience in relational databases involved in application development using several RDBMS like IBM DB2, MS SQL Server, Oracle and MySQL.
- Experience in using Agile, SCRUM and Waterfall methodology to deliver the projects.
- Hands-on experience using LINQ and Entity Framework for data centric applications building.
- Used configurations management tools like Team Foundation Server (TFS) and GIT.

TECHNICAL SKILLS

- **Amazon Web Services:** EC2, ELB, VPC, RDS, IAM, Cloud Formation, S3, Cloud Watch, Cloud Trail, SNS, SQS, SWF, EBS, EMR, Dynamo DB, Redshift, Elastic Beanstalk, Route53, Aurora
- **SCM Tools:** Subversion, Bitbucket, GIT, Clear Case.
- **Build Tools:** Ant, Maven, Gradle.
- **Cloud Platforms:** AWS, Azure, GCP, PCF.
- **Continuous Integration Tools:** Jenkins, Hudson, Bamboo, Team City, Octopus
- **Configuration Management Tools:** Chef, Ansible, Puppet and Salt Stack, Vault
- **Tracking Tools:** Jira, Remedy, Clear Quest, Bugzilla, Zabbix, Rally, Fisheye
- **Data Engineering & Visualization:** Power BI, Tableau, ETL,
- **Containers:** Docker, Kubernetes, Docker Swarm, Mesos.
- **Virtualization:** Oracle Virtual Box, VMware, Vagrant.
- **Scripting Languages:** Shell scripting, Python, Ruby, Perl, Bash
- **Programming Languages:** C, C++, Java, JSON, Go, Python, Spring Boot
- **Web Frameworks:** React JS, AngularJS
- **Databases:** Oracle, MS SQL Server, MySQL, NoSQL, Neo4j, Graph DB, PostgreSQL, MongoDB
- **Web/Application Servers:** WebLogic, WebSphere, JBoss, Apache Tomcat, TFS, IIS, Nginx, Kafka
- **Operating System:** Linux (Red hat, Cantos, Ubuntu, SUSE), UNIX (HP - UX, Solaris, Confidential AIX) and Windows.

- **Methodologies:** Agile, Scrum, Kanban, ITIL, and Waterfall.
- **Monitoring Tools:** Splunk, Nagios, ELK
- **Authorization Protocols:** OpenID Connect (JWT), SAML, OAuth, OpenID
- **Networking & Communication Protocols:** DNS, Router, Load Balancer, Subnetting, VPN, Network ACLs, TCP/IP, HTTP/HTTPS, SSH, FTP, SCP, RSYNC, RMI/IIOP.

EDUCATION

- Bachelors in Computer Science JNTU, 2013

WORKING EXPERIENCE

Barclays, McKinney TX

Feb 2023 – till present

Sr. Golang Developer

Responsibilities:

- Gathered requirements from clients and implemented procedures for solution demonstrations.
- Applied Vault's encryption-as-a-service capabilities in Go projects, utilizing its APIs for key management and data encryption to protect data at rest and in transit without managing encryption keys manually.
- Automated the Vault authentication process from Golang applications using tokens, Kubernetes, AWS, and other authentication backends, ensuring secure, automated access to secrets.
- Created dynamic data pipelines with Spring Batch, integrated with Kafka and deployed via K8s CronJobs.
- Designed and maintained backend libraries for data processing pipelines, optimizing memory usage and runtime by 25%. Contributed patches to open-source Python packages as Pandas extensions, API integrations to improve stability and feature coverage.
- Engineered multi-threaded backend services and contributed to internal Java libraries, reducing request latency and improving fault tolerance in distributed systems. Published bug fixes to open-source Java frameworks, ensuring compliance with new JVM versions.
- Developed and optimized performance-critical modules for backend systems in C++, improving throughput by 40% and reducing memory leaks. Contributed patches to open-source C++ libraries like Boost, gRPC, enhancing functionality and fixing core issues
- Strong track record of debugging, profiling, and patching backend systems at the library/framework level rather than only consuming them, ensuring efficient and reliable software foundations.
- Led migration efforts from Go to C#, ensuring feature parity, stability, and no production regressions.
- Designed and implemented graph-based data models in Neo4j to optimize relationship-intensive queries, improving query performance by 300% over relational alternatives.
- Proficient in defining and managing Vault policies to control access to secrets based on the principle of least privilege, ensuring that Golang applications access only the secrets they need.
- Experienced in working with various Vault secrets engines through Go, managing not only static secrets but also utilizing engines like Transit, PKI, and SSH for diverse secret management tasks.
- Created database SQL scripts and Go code to interact with SQL and NoSQL databases.
- Utilized STL and C++ algorithms to achieve optimal design efficiency.
- Performed S3 buckets creation, and policies on the IAM role based polices and customizing the JSON template.
- Created API documentation and migration guides to support engineers transitioning to a new C# codebase.

- Create and manage Terraform and CloudFormation templates as infrastructure as code.
- Designed, developed, tested, maintained, and documented enterprise applications in Golang, Python, and PL/SQL.
- Refactored monolithic PHP systems into modular microservices, integrating them with Go-based APIs for scalability and maintainability.
- Conducted accessibility audits using tools like AXE, Lighthouse, and NVDA, ensuring compliance with ADA and Section 508 regulations.
- Spearheaded migration of large-scale legacy C# applications to Golang microservices, improving system performance and reducing latency by 40%.
- Optimized performance by employing React's virtual DOM for efficient rendering and minimizing page load times.
- Integrated third-party libraries and plugins seamlessly into React applications, extending functionality and enhancing user experience.
- Conducted code reviews and provided mentorship on React best practices, fostering a culture of excellence and continuous improvement.
- Resolved complex UI/UX challenges by harnessing React's flexibility and extensibility, ensuring consistency and usability across the application.
- Extensive use of cloud shell SDK in GCP to configure/deploy the services like Cloud Dataproc (Managed Hadoop), Google Cloud Storage and Cloud Big Query
- Worked on CI/CD tool Jenkins to automate the build process from version control tool into testing and production environment.
- Experience writing data APIs and multi-server applications to meet product needs using Golang.
- Experience in writing the HTTP RESTful Web services and SOAP API's in Golang.
- Integrated Jenkins to git where the build triggers automatically when we push a pull request for CI/CD.
- Implemented rules and logic to provide indicative and corporate actions data to new subscribers by extracting all the required information from database and pushing messages using C++ and Rogue Wave.
- Developed responsive, modular front-end applications using Angular 13+, improving load times and user engagement by 30%.
- Write and implement the respective IAM policies as required per the respective services
- Wrote Terraform scripts using Golang and automating the deployments on AWS using Terraform, Puppet, Chef and Jenkins
- Led migration of containerized workloads from AWS EC2 and Amazon Container Service (ACS) to Amazon EKS, achieving a 40% reduction in deployment time and improving system scalability.
- Hands-on experience in GCP, Big Query, GCS buckets, cloud function, cloud dataflow, Pub/sub, cloud shell for development, BQ command line utilities for loading, Data Pro for spark jobs, Stack driver for custom monitoring
- Utilized gRPC features such as authentication, encryption, and load balancing to ensure secure and reliable communication between services.
- Containerized applications using Docker: Created docker files, built docker images for microservices to run on Kubernetes platform.
- Designed configurable REST APIs on demand using Go.
- Developed new RESTful API services that work as a middleware between our application and third-party APIs that we will use using Golang.
- **Environment:** Golang, AWS, Python, C++, Java, IAM, Goroutine, Microservices, Gokit, ORM GORM, CLI, Gorilla Mux, Go-hystrix, godoc, ginkgo, gRPC, JavaScript, HTML5, CSS3, Angular,

React, AWS, DynamoDB, Google Cloud Platform, Bash, Erlang, Spring, Hibernate, Docker, Elasticsearch, JSON, Maven, Rest, JSON, Jira, Jenkins, Eclipse, Git, SVN, Linux

KPMG, TX - REMOTE

Nov 2019 - Dec 2022

Golang Developer

Responsibilities:

- Gathered requirements from clients and implemented procedures for solution demonstrations.
- Experienced in using Go technologies on UNIX and Linux platforms, including AWS IAM for managing user permissions.
- Used Docker and Jenkins to deploy applications to AWS using continuous delivery/continuous integration (CI/CD) pipelines, and Terraform to deploy and manage infrastructure on AWS.
- Automated Power BI refresh cycles using Power BI REST APIs and integrated them into CI/CD pipelines.
- Led the migration of core services from Golang to C#, ensuring feature parity and zero regression during the transition.
- Implemented a SOAP web service client program to process and store corporate actions data from various vendor feeds using C++, and used AWS Lambda functions to trigger microservices written in Golang.
- Mentored teams in migration and cross-skill development, promoting knowledge transfer from Golang to C#.
- Built a RESTful API using Node.js to handle requests sent from the front-end jQuery Ajax calls, and implemented Prometheus and Grafana to identify Kafka message failure scenarios.
- Designed and deployed microservices architecture using Spring Boot on Kubernetes, improving scalability and deployment speed by 60%.
- Have strong experience in database programming using SQL and stored procedures, and developed a RESTful web API using Spring Boot and Spring Data to communicate with MongoDB.
- Experienced in developing user interfaces using ASP.NET, AJAX, HTML, CSS, JavaScript, and jQuery, and developed a back-end tool for logging in Node.js to be viewed in Kibana.
- Have working experience with Docker, Jenkins, pipelines, and Kubernetes, and implemented the use of AWS NoSQL DB DynamoDB to dump data in JSON format.
- Developed web services using SOA technologies such as SOAP, WSDL, SOAP/HTTP, SOAP/JMS, and SMTP, and optimized gRPC performance by configuring connection pooling, compression, and flow control settings.
- Integrated Neo4j clusters and ETL workloads into Kubernetes with persistent volume claims and resource tuning for optimal performance.
- Collaborated with business stakeholders to design self-service Power BI datasets and dashboards aligned with departmental KPIs.
- Optimized legacy ETL flows by implementing stream-based processing and asynchronous scheduling, reducing daily batch load time by 40%.
- Led the migration of legacy SQL-based systems to Neo4j, enabling real-time recommendation engines and fraud detection use cases.
- Implemented state management solutions with React's Context API and Redux, ensuring efficient data flow and application state synchronization.
- Collaborated with design teams to translate wireframes into visually stunning interfaces, delivering compelling user experiences with React.
- Built reports for monitoring data loads into GCP and driving reliability at the site level.

- Created gRPC unit tests and integration tests to ensure the correctness and reliability of the implemented functionality, and worked on S3 Events, SNS, SQS, DynamoDB, and Athena for triggering multiple Lambda functions written in Golang.
- Introduced to Golang while working within a project, and wrote microservices using Golang.
- Developed RESTful/WCF web services, APIs, and other back-end components, and deployed and monitored scalable infrastructure on Amazon Web Services (AWS) using Terraform.
- Experience in using IDEs like Golang, and developed server-side software modules and client-side user interface components deployed entirely in the Compute Cloud of Amazon Web Services.
- Involved in unit testing and integration testing in the development environment to ensure that the application met specifications.
- **Environment:** Golang, Go, C++, GCP, Java, Docker, Jenkins, Kubernetes, Postman, Git, GoLang, Linux, Python, Shell Scripting, JSON, Web Services, GIT, ELK, Kibana, Terraform, Prometheus/Grafana, JavaScript, Gitlab CI/CD, AWS and Jira.

AAVMA, VA - REMOTE

June 2016 – Oct 2019

Golang Developer

Responsibilities:

- Created a command-line interface to build and deploy static sites with Golang, incorporating AWS S3, CloudFront, Lambda and API Gateway reducing page load.
- Built Restful API by building Node JS Server in the back-end to handle requests sent from the front-end jQuery Ajax calls.
- Implemented and maintained audit logs via Vault for Go applications, ensuring compliance with security policies and regulations by keeping detailed records of secret access and operations.
- Deep understanding of Vault's Go client SDK, which abstracts Vault's HTTP API, allowing for cleaner and more maintainable code when interacting with Vault from Golang applications.
- Set up and maintained high-availability configurations for Vault with Golang services, understanding the importance of fault tolerance and disaster recovery in secret management.
- Experience in developing User Interfaces using ASP.NET, AJAX, HTML, CSS, JavaScript, jQuery.
- Read the data files from the source (GCP) and do the code changes in Job Modules and hql Scripts and its dependent tables as the per the Business user need.
- Involved in Unit Testing and Integration testing in development environment and ensuring application is according to specifications.
- Deployed and monitored scalable infrastructure on Amazon Web Services (AWS) and also used AWS CLI to control various AWS services over SHELL/Bash.
- Created Javascript cohesion with HTML5 and bootstrap to ensure a responsive design.
- Expertise with NoSQL databases like HBase, Cassandra, Dynamo DB (AWS) and MongoDB.
- Developed the view-controller components using Servlets/JSPs, JavaScript, CSS, Web services, and DHTML.
- Developed Dev/Test/Prod environments of different applications on AWS by provisioning Kubernetes clusters on EC2 instances using Docker, Bash, Chef, and Terraform.
- Performed Automating testing using Fittesse page requiring python, JavaScript for parsing.
- Worked on Migration of Source code from SVN to Bitbucket(Git).
- Built Web pages that are more user-interactive using React JS and Node.js
- Developing SSO/SAML client application using the stack of technologies.
- Analyzed code to identify and improve performance bottlenecks and contingencies with shared resources. Streamlining the code was instrumental in reducing support costs.

- Manager and SaaS, PaaS and IaaS concepts of Cloud Computing and Implementation Worked with Google Cloud (GCP) Services like Compute Engine, Cloud Functions, Cloud DNS, Cloud Storage and Cloud Deployment using GCP
- Implement web user interface to manage Erlang internal Mnesia database.
- Developed web services components using XML, SOAP and Axis.
- Executed the test steps defined in Test Cases manually and reported the bugs in JIRA.
- Developed Microservices to utilize Go language, REST web services in the client's environment.
- Environment: GoLang, AWS, C++, IAM, Java, Devops, GCP, Linux, Python, Shell Scripting, JSON, Web Services, GIT, ELK, Kibana, Terraform, Prometheus/Grafana, JavaScript, Gitlab CI/CD and Jira.

123Signup, India
Software Engineer
Responsibilities:

Aug 2013 – Jan 2015

- Developed RESTful/Cloud Endpoints web services, APIs, and other back-end components in Golang.
- Involved in unit testing and integration testing in the development environment and ensured that the application met specifications.
- Designed, developed, tested, and maintained Looker functional reports based on user requirements.
- Consumed a SOAP XML web service exposed by third parties for validating service address and credit check.
- Coded Cloud SQL stored procedures and integrated them with the application.
- Fixed front-end issues using JSTL, custom tags, and Google Tag Manager.
- Developed a basic framework for the project using Spring Boot, Google Cloud Datastore, and other APIs.
- Developed entity classes and established relationships between them using annotations.
- Unit tested and integrated tested the owning use cases.
- Used cursors, dynamic SQL, and functions as part of the project/application requirements to fix bugs that were found in the UAT phase before production.
- Deployed the application in the Google Kubernetes Engine (GKE) environment and provided test support to the QA team.
- Developed various back-end application programs such as views, functions, triggers, procedures, and packages using SQL and PL/SQL for the top management for decision-making.
- Designed the Google Cloud SQL database schema for the tables.
