SUMMARY

Senior Golang Engineer with 10+ years of experience building high-performance distributed systems, cloud-native infrastructure, and scalable APIs processing millions of daily transactions. Expert in designing microservices architectures with Go, Kubernetes, AWS, and GCP, improving system latency by 40% and deployment speed by 60% through CI/CD automation and infrastructure-as-code. Proven track record delivering enterprise backend platforms, AI-powered communication systems, and observability-driven services in fast-paced engineering organizations.

Professional Experience

Senior Golang Backend Engineer

Movius AI | Remote / Sunnyvale, CA | Jan 2022 – Present

Movius AI develops secure enterprise communication platforms with AI-powered conversation intelligence used by financial institutions and global enterprises.

- Architect and develop high-performance Golang microservices powering AI-driven communication platforms supporting enterprise voice and messaging services.
- Designed distributed backend services handling millions of real-time message transactions daily, improving throughput by 45% using optimized Go concurrency patterns.
- Implemented event-driven architecture with Kafka and gRPC, enabling scalable AI conversation processing pipelines.
- Built secure backend APIs supporting compliance-ready enterprise communication platforms used by financial services organizations.
- Deployed containerized services using Docker and Kubernetes on AWS, ensuring high availability across global deployments.
- Implemented observability frameworks using Prometheus, Grafana, and distributed tracing, reducing incident resolution time by 30%.
- Automated infrastructure provisioning with Terraform and Helm, improving release reliability and operational efficiency.
- Partnered with AI/ML teams to integrate NLP and conversational intelligence pipelines into backend systems.

Senior Golang Backend Engineer

Google | Sunnyvale, CA | Jan 2017 – Dec 2021

Google Cloud Platform provides highly scalable infrastructure and developer services used by global enterprises.

- Built distributed microservices in Golang supporting internal Google Cloud infrastructure, processing millions of API requests daily.
- Designed high-throughput APIs using Go, gRPC, and GraphQL, improving service response times by 35%.
- Led migration of legacy backend services into Kubernetes-native microservices on Google Kubernetes Engine (GKE)
- Developed internal platform SDKs in Go enabling standardized microservice development across 20+ engineering teams.
- Implemented advanced observability using Prometheus, Grafana, and Loki, improving system reliability and service visibility.
- Automated cloud infrastructure provisioning using Terraform and CI/CD pipelines, accelerating deployment frequency.
- Optimized service communication using custom middleware for metrics, tracing, and rate limiting.
- Built React and TypeScript internal developer dashboards visualizing microservice health, deployments, and platform metrics.

Software Engineer (Golang & Platform Systems)

Datadog | Portland, OR | Jan 2013 – Dec 2016

Datadog provides monitoring and observability platforms for cloud infrastructure and enterprise applications.

- Develop Golang backend services powering Datadog observability platforms used by DevOps teams worldwide.
- Designed scalable metrics ingestion pipelines and analytics services using Go, PostgreSQL, and Redis.
- Implemented backend APIs supporting real-time monitoring dashboards and alerting infrastructure.
- Built full-stack monitoring tools using React, Redux, and TypeScript enabling dynamic dashboard configuration.
- Containerized backend services with Docker and Kubernetes, improving system scalability and reliability.
- Automated infrastructure provisioning using Terraform and CI/CD pipelines, reducing operational overhead.
- Improved system performance by optimizing data streaming pipelines and query execution workflows.
- Developed automated test coverage using Go testing frameworks, Cypress, and Jest.

Education

University of Florida

Bachelor of Science – BS, Computer Science

Gainesville, FL | Sep 2008 – May 2012

Core Competencies

Golang Backend Engineering

Distributed Systems Architecture

Cloud-Native Infrastructure

Kubernetes Platform Engineering

Microservices Development

Observability & Monitoring Systems

API Development (REST, gRPC, GraphQL)

DevOps Automation & Infrastructure as Code

Technical skills

Programming & Frameworks

- Golang, React.js, JavaScript (ES6+), TypeScript, GraphQL, HTML5, CSS3, Python, Redux

Backend & Systems

- Microservices, REST, gRPC, PostgreSQL, Redis, Kafka, RabbitMQ, Clean Architecture, WebSockets

Cloud & DevOps

- Kubernetes (GKE, EKS), Docker, Helm, Terraform, GitHub Actions, ArgoCD, CI/CD Pipelines

Cloud Providers

- AWS (EC2, RDS, S3, Lambda, CloudWatch), GCP (GKE, Pub/Sub, Cloud Run)

Monitoring & Testing

- Prometheus, Grafana, Loki, Cypress, Jest, Go TDD, Mocha, Chai

Tools & Methodologies

- Git, Bitbucket, Jira, Scrum/Agile, Swagger/OpenAPI, Postman
