Software Development Lead | Golang & PHP

Golang | Kubernetes | HELM | Grafana | Prometheus | Loki | Kafka | gRPC | AWS | MySQL | MongoDB | Postgres | PHP | Laravel | React

Senior software engineer with 16+ years of experience building scalable, cloud-native backend systems. Expert in Go (Golang) with a strong focus on distributed systems, Kafka-based event-driven architectures, gRPC, and high-concurrency services. Proven ability to improve performance, reliability, and operational efficiency through clean architecture, automation, and observability. Experienced in translating complex business requirements into robust technical solutions and leading teams to deliver production-ready systems.

PROFESSIONAL SKILLS

- **Languages:** Go (Golang), PHP, Python, JavaScript.
- **Frameworks & Libraries:** Gin, Gorilla Mux, Laravel, Django, Zend Framework, React, CodeIgniter, jQuery, Tailwind, Bootstrap.
- **Database:** MySQL, PostgreSQL, MongoDB, Redis, Elasticsearch, Database optimization, indexing strategies, query tuning, caching strategies.
- **Cloud, DevOps & Infrastructure:** AWS (EKS, MSK, EC2, S3, RDS, Lambda, IAM, ALB), Docker, Kubernetes (Deployments, StatefulSets, HPA, Ingress, LoadBalancer, ConfigMaps, Secrets), Helm, Terraform, Jenkins, GitHub Actions, CI/CD pipeline automation, Linux system administration.
- **Observability:** Grafana, Prometheus, Fluent Bit, Loki, Sentry.
- **Testing:** PHPUnit, Apache JMeter, Postman.
- **Tooling:** Git, VS Code, PhpStorm, NetBeans, Laravel Horizon, Valet, Trello, Twilio.
- **Architecture:** Kafka (producers, consumers, partitions, offsets, consumer groups), Microservices architecture, gRPC, RESTful APIs, WebSockets, Concurrency models (goroutines, channels, worker pools), Go modules, event-driven systems, idempotency, fault tolerance.
- **Design Patterns:** Clean code, modular design, SOLID and DRY principles (applied pragmatically), composition over inheritance, Factory, Strategy, Adapter, Decorator, Data Mapper, Repository pattern.

CERTIFICATIONS

- | | |
|--|---------|
| • Certified Laravel Developer , <i>Laravel LLC</i> | 07/2020 |
| • Zend Certified Engineer - Zend Framework , <i>Zend Technologies</i> | 07/2013 |
| • Zend Certified Engineer - PHP , <i>Zend Technologies</i> | 06/2006 |

WORK EXPERIENCE

Acore Health - Houston, TX
Senior Golang Developer

03/2024 - present

- Designed and implemented a **SaaS-based patient demand and marketing platform** for Acore Health, building **high-concurrency backend services in Go** using goroutines, channels, and gRPC.
- Architected and evolved a **microservices-based, event-driven system** using **Kafka and gRPC**, enabling high-throughput, real-time data pipelines and automated workflows.

- Implemented **Kafka-based asynchronous communication** to support fault-tolerant service interactions and automated multi-channel marketing campaigns (Email, SMS).
- Developed campaign execution and reporting services in **Go**, leveraging **worker pools and parallel processing** to reduce campaign execution time significantly.
- Built analytics and reporting for **Lead, Workshop, and Campaign** metrics, enabling data-driven decision-making across the platform.
- Deployed and operated Go microservices on **AWS EKS**, using **Kubernetes, Helm, Terraform, and AWS MSK** to ensure scalability, reliability, and operational consistency.
- Automated infrastructure provisioning and deployments using **Terraform and Helm**, and established **CI/CD pipelines with GitHub Actions** for reliable, repeatable releases.
- Implemented **observability and monitoring** with Prometheus, Grafana, and alerting integrations, enabling proactive detection and resolution of production issues.
- Applied **clean architecture principles** and **SOLID/DRY practices**, favoring composition over inheritance to maintain modular, maintainable Go services.
- Optimized data access across **MySQL and MongoDB** through query tuning, indexing, caching strategies, and connection pooling, improving performance by **90%+**.
- Integrated third-party platforms, including **Twilio (call tracking)**, **Mailgun (email analytics)**, and **Facebook Marketing API (ad tracking)**, with centralized logging and error tracking via **Zap**.
- Supported Agile and Scrum practices, contributing to improved sprint predictability, delivery quality, and cross-team knowledge sharing.

Skills: Golang · gRPC · Kafka · Kubernetes · Helm · MySQL · PostgreSQL · Prometheus · Grafana · Loki · Fluent bit · Slack alerts · Linux system administration · Call Tracking · AWS · Git · Twilio · Mailgun · Database optimization · Redis · Microservices · GitHub Actions · CI/CD · Facebook API

Reformed Tech - Dhaka

10/2017 - 02/2024

Senior PHP/Golang Developer/Lead

- Led the **end-to-end architecture, design, and development** of a high-performance **eCommerce platform**, integrating EMI options, multi-tier role-based access control, and pre-order workflows.
- Engineered **modular, scalable microservices** using **Golang, PHP, and Laravel**, ensuring maintainability through **SOLID principles** and **Design Patterns** such as Factory, Strategy, and Singleton.
- Developed advanced **Elasticsearch**-powered search and filtering capabilities, fine-tuned analyzers, tokenizers, and scoring algorithms to improve search accuracy by **50%**.
- Built high-performance **Golang services** leveraging **goroutines, channels**, and worker pools to handle concurrent order processing, payment workflows, and event-driven tasks with minimal latency.
- Implemented **Redis caching strategies** to reduce database load and improve API response times for high-traffic eCommerce events.
- Created automated workflows for **order lifecycle management**, including refund, replacement, and payment distribution processes integrated with external payment gateways.
- Built **RESTful Web Services** for order processing, inventory management, and user management, ensuring secure communication through **JWT authentication** and **HTTPS**.
- Containerized microservices using **Docker**, enabling consistent deployment across environments and simplifying scaling.
- Deployed applications on **Linux-based infrastructure**, utilizing **NGINX load balancing** to optimize request distribution and maximize uptime.

- Configured **Jenkins CI/CD pipelines** for automated build, test, and deployment processes, integrating unit tests and regression suites.
- Conducted **performance testing** and **stress testing** using **Apache JMeter**, ensuring resilience during peak loads.
- Optimized database queries and schema design for **MySQL** and **PostgreSQL**, reducing query execution time and improving transactional throughput.
- Used **Git** for source control, implementing **branching strategies** and code review processes to maintain code quality and team collaboration.
- Monitored application performance and logs using **Elasticsearch**, **Kibana**, and **Metricbeat** for proactive troubleshooting.
- Applied **Microservices orchestration principles**, ensuring inter-service communication via **gRPC** and **RESTful APIs**.
- Mentored a 5-member engineering team on coding standards, **design patterns**, and **best practices** in scalable system design.
- Worked in **Agile/Scrum** methodology, participating in sprint planning, backlog grooming, and retrospective meetings.

Skills: Golang · PHP · React.js · Laravel · Python · Amazon Web Services (AWS) · Design Patterns · Microservices · Linux system administration · Load Balancing · Jenkins · RESTful WebServices · Elasticsearch · Git · Database Optimization · Redis · Docker · Sentry · Horizon · Fluentd

Spark Media Pty Ltd - *Sydney, Australia*

02/2012 - 04/2016

Sr. Software Engineer (Offshore, Upwork Marketplace)

- Engineered the development of a lead generation engine for universities using **PHP (CodeIgniter)**, **MySQL**, and the Smarty template engine, enabling the creation of dynamic, multi-page landing pages tailored for individual campaigns.
- Designed and implemented a centralized lead management system with **RESTful APIs** for tracking, routing, and analyzing leads across multiple university campaigns.
- Developed secure lead capture forms with server-side validation and anti-spam mechanisms using **PHP**, enhancing data quality and integrity.
- Implemented access control and authentication using CodeIgniter's session and user management, ensuring secure and role-based usage of the system.

I2We Inc - *Lafayette, CA*

08/2008 - 09/2011

Sr. Software Engineer (Offshore)

- Developed a Facebook app prototype adhering to Facebook's technical and design specifications, serving as the blueprint for 300+ subsequent applications like "I Am Nurse" and "Michael Jackson Memorial," achieving a 95% approval rate for app submissions and positive user feedback.
- Crafted a mobile top-up application and effectively collaborated with Rowamware Inc.'s core system through RESTful API integration. Rowamware Inc., a U.S.-based client of I2We Inc., focuses on mobile solutions, particularly roaming services.

EDUCATION

Shahjalal University of Science & Technology

BSc in Computer Science & Engineering
