

Rashmi Ranjan Sahoo

+1 (901) 462 7069 | rrsahoo1979@yahoo.com | Pittsburgh, PA - 15219. USA.

Profile Overview:

Accomplished and results-driven **Java Technical Lead** with over **19 years of experience** in Java/J2EE technologies, including 12 years of international onsite engagement across the USA and Germany. Adept at driving the full software development lifecycle — from requirements gathering to production deployment — while leading cross-functional teams and fostering high-performance delivery in Agile environments. Domain experiences spans **Banking, Logistics**, Automotive and Manufacturing sectors.

Specialized in designing and building scalable, event-driven microservices architectures, deploying applications on OpenShift Cloud using CI/CD pipelines (Jenkins), and delivering high-quality, maintainable APIs and enterprise solutions. Known for a strong commitment to emerging technologies, open-source contributions, and continuous innovation.

Experienced in **leading** development teams, **driving** Proof of Concept (POC) initiatives, and **participating** in architectural design discussions and documentation. A proactive problem-solver with deep expertise in distributed systems, DevOps integration, and cloud-native development practices.

Experience Summary:

Core Competencies:

- **Microservices Architecture:** Expert in Spring Boot, RESTful APIs, Kafka-based messaging and event-driven systems.
- **Agile Delivery:** Extensive experience with Agile/Scrum methodologies, using tools like JIRA to support collaborative development and effective change management processes.
- **Technical Leadership:** Hands-on leadership in design (HLD/LLD), code quality, mentoring, architectural decision-making and legacy system integrations.
- **CI/CD & DevOps:** Experienced in Jenkins pipelines, OpenShift (OCP), containerization and automated deployment strategies.
- **Business Rules & Integration:** Implementation using IBM ODM (BRE), TIBCO Spotfire for reporting.

Technical Skills Snapshot:

Languages & Frameworks:

- Java, Spring Boot, Spring Framework, REST APIs, JPA, Hibernate, JSP, Servlets, JDBC, SOAP.

Messaging & Streaming:

- **Apache Kafka:** Producers/Consumers, cluster configuration, real-time streaming, and event handling.

Tools & Platforms:

- Jenkins, OpenShift (OCP), IntelliJ, SonarQube, Dynatrace, JIRA, Bitbucket, SVN, Maven, Gradle.

Databases:

- MySQL, Oracle, DB2, PL/SQL, SQL Developer, MySQL Workbench.

Design & Documentation:

- MS Visio, Eclipse UML Plugins – expertise in Sequence, Class, and Flow Diagrams for LLD/HLD.

Business Rules & Reporting:

- IBM ODM (BRE), TIBCO Spotfire (for visual analytics).

Other Technologies:

- OAUTH and PING Securities, AWS, Split.io, UNIX Shell Scripting.
- **Project Management Tools:** Primavera, MS Project.

Relevant Project Experience:**A. Organization: CGI Technologies and Solutions Inc.****February 2020 – Till Date**

Job Title: Senior Consultant | Client: PNC Bank

1. Application Enhancement and Maintenance Project in Online Banking Area (From April 2024 to till-date)**Role:** Technical Lead**Project Overview:**

This project focused on enhancing and resolving issues within existing online banking applications, with an emphasis on improving system stability and performance. Additionally, it involved supporting customer onboarding processes as part of the transition to a next-generation digital banking platform.

Tools & Technologies:

Java 17, Spring Boot, Spring Framework, JPA, RESTful Micro Services, Kafka, MySQL, BRE-ODM, PING, OAUTH, Swagger, Split.io, Mapstruct, Lombok, Spock, Gradle, Git-BitBucket, Jenkins Pipelines, Sonarqube, Dynatrace, Postman Client, SOAP UI, Tomcat, JIRA, Openshift (OCP), IntelliJ, AGILE.

Responsibilities:

- Collaborating with the Product Owner, Technical Manager, Scrum Master, and Business Systems Analyst (BSA) for release planning, effort estimation, and prioritization of enhancements and defect fixes.
- Leading the end-to-end development lifecycle, including implementation, code review, validation support, deployment package preparation, production deployment, and post-release support.
- Handling release and change management processes in alignment with PNC's compliance and governance guidelines.
- Leading two separate teams working across three applications, ensuring timely and high-quality deliverables.
- Providing cross-functional mentorship to team members, other team-leads, fostering skill development and knowledge sharing across teams.

2. Development Project in Deposits Area (From December 2021 to March 2024)**Role:** Technical Lead**Project Overview:**

This project centers on the development of a next-generation deposits platform aimed at providing PNC's customers with access to advanced, cutting-edge banking features. The initiative focuses on delivering innovative and modernized deposit functionalities aligned with current industry trends, enhancing the overall digital banking experience.

Tools & Technologies:

Java 11, Spring Boot, Spring Framework, JPA, RESTful Micro Services, Kafka, MySQL, Oracle DB, BRE-ODM,

PING, OAUTH, Swagger, Mapstruct, Lombok, Spock, Gradle, Git-BitBucket, Jenkins Pipelines, Sonarqube, Dynatrace, Postman Client, SOAP UI, Tomcat, JIRA, Openshift (OCP), IntelliJ, AGILE.

Responsibilities:

- Interacted with SMEs, Wing Captains, Product Owners, Scrum Masters, and Business System Analysts to:
 - Plan and finalize release scope and roadmap
 - Add new functionalities and manage project backlog grooming/refinement
 - Coordinate sprint planning and organize sprint demos
- Collaborated with Project Architects and other Technical Leads to:
 - Design complex architecture solutions
 - Develop Proof of Concepts (POCs) and conduct feasibility analysis for proposed technical solutions
- Lead database design/updates and ensure Kafka integration for real-time data streaming
- Developed and implemented complex application features such as job processors, and built Kafka producers/consumers for real-time data processing and event-driven communication
- Led development team to:
 - Distribute and Estimate stories/tasks and provide technical guidance
 - Conduct code reviews and align team activities with release plans
 - Prepare for sprint demos and deployment package deliveries
- Collaborated with the testing team to:
 - Plan and support regression and Quality Engineering (QE) testing
 - Ensure testing activities were in sync with sprint and release timelines
 - Perform unit testing to verify functionality, technical compliance, and security standards
- Designed and developed business rules using the BRE-ODM tool
- Worked with the Release Management team to:
 - Create, review, submit, and execute change requests (CRs)
 - Perform release activities including staging and deploying applications to PNC production environments using both manual and automated tools/processes
- Facilitated knowledge transitions for new team members and internal stakeholders, supporting onboarding and scale-up efforts under the PNC Ready-to-Scale initiative

3. Development Project in Payments Area (From February 2020 to November 2021)

Role: Senior/Lead Developer

Project Overview:

This project was designed to develop a suite of applications forming the backbone of a modern, next-generation banking platform. It aimed to enable PNC's customers to access and experience the latest trending banking functionalities, supporting the bank's digital transformation and innovation strategy.

Tools & Technologies:

Java 8, Spring Boot, Spring Framework, JPA, RESTful Micro Services, MySQL, OAUTH, Swagger, Mapstruct, Lombok, Spock, Gradle, Git-BitBucket, Jenkins Pipelines, Sonarqube, Postman Client, SOAP UI, Tomcat, JIRA, Openshift (OCP), IntelliJ, AGILE.

Responsibilities:

- Collaborated closely with Subject Matter Experts (SMEs), Wing Captains, Product Owners, Scrum Masters, and Business System Analysts (BSAs) to:

- Analyze business and technical requirements, and propose effective, scalable solutions.
- Actively participate in backlog grooming and refinement sessions to ensure clarity and feasibility of user stories.
- Contribute to sprint planning and coordinate sprint demo sessions to showcase deliverables and gather feedback.
- Developed and implemented complex application features such as job processors
- Led development team to:
 - Conduct code reviews and align team activities with release plans
 - Prepare for sprint demos and deployment package deliveries
- Collaborated with the testing team to:
 - Support regression and Quality Engineering (QE) testing
 - Perform unit testing to verify functionality, technical compliance, and security standards
- Worked with the Release Management team to:
 - Create, review, submit, and execute change requests (CRs)
 - Perform release activities including staging and deploying applications to PNC production environments using both manual and automated tools/processes

B. Organization: Atos Syntel Inc. (Formerly, Syntel Inc.)

October 2005 – February 2020

Job Title: Consultant | Clients: FedEx, Daimler Trucks North America (DTNA), Daimler AG, Daimler Chrysler (DCX) | Roles: Technical Lead / Lead Developer

1. Maintenance / Enhancement Projects in FedEx Info Security and Networking Areas (Mar 2017 – Feb 2020):

Technologies/Skills Used: Java/J2EE, SQL, WebLogic, Struts-2, SOAP and REST based Web Service, Apache POI OOXML and Schemas, Log4J2, Spring Framework, Java Swing, Maven, SOAP UI, Postman Client, SSO and LDAP Integration, PERL, Unix Shell-Script, HTML, Bootstrap, Eclipse, SVN/CoNexus, Jenkins, WinSCP, Putty, MS-Visio, Oracle DB, SQL Developer, TIBCO-Spotfire, HP-QC, HP-AGM and Pivotal Tracker.

Responsibilities:

- Day-to-day customer interaction/communications and providing development and support for existing applications and processes, along with offshore coordination.
- Understanding of SRS (Software Requirement Specification) and participating in High-Level and Detailed-Level Design Discussions. Preparing Low-Level Design Specifications following FedEx standards.
- Reviewing the design and changes with FedEx Lead/Architect.
- Conducting Impact Analysis on requirements, changes, and defects, and estimating implementation effort.
- Coding/Development of critical functionalities based on approved design, performing local/DEV validations, writing SQL queries, and providing UAT support.
- Preparing deployment packages and deploying changes or new functionalities in DEV, TEST, QA, and PROD environments following FedEx-specified processes and guidelines.
- Understanding and modifying PERL and UNIX scripts as required.
- Writing test cases, executing test scenarios, and performing application testing.
- Preparing Proof of Concepts (POCs) on new tools (e.g., TIBCO-Spotfire) for potential team usage.
- Following Agile methodologies using HP-QC, HP-AGM, and Pivotal Tracker.

2. Legacy System Migration Projects in FedEx Revenue Area (Mar 2016 – Feb 2017):

Technologies/Skills Used: Java/J2EE, SQL, WebLogic, Spring MVC and JDBC/ORM, SOAP based Web Service Publisher and Client using FedEx proprietary Framework, REST Web Service Client, SSO and LDAP Integration, SVN, MAVEN, Eclipse, WinSCP, Putty, mRemoteNG, MS-Visio, Oracle DB, DB Visualizer, HP-QC, SOAP UI, Caliber RM and Jenkins.

Responsibilities:

- Day-to-day customer interactions throughout different phases of the project, including project status reporting and offshore coordination.
- Collaborating with the FedEx Business Analyst Team to prepare Software Requirement Specification (SRS).
- Understanding SRS, participating in High-Level and Detailed-Level Design Discussions, and preparing the Work Product Review Document in accordance with FedEx standards.
- Involved in project development and delivery activities, including:
 - Project planning and software estimation.
 - Preparing Low-Level Design (including Flow, Sequence, and Class Diagrams) and conducting design reviews.
 - Coding, code reviews, test-case preparation and execution, and functional testing.
 - Conducting functional reviews and preparing and presenting end-product demos to customers.
 - Deployment package creation and active participation in deployment activities across all environments (DEV, TEST, QA, PROD) following FedEx-specified processes/guidelines.
 - Providing UAT support during testing and release cycles.

3. Development Project on Quotation, Contract and Pricing Preparation in FedEx Service Area (Apr 2013 - Feb 2016):

Technologies/Skills Used: Java/J2EE, SQL, WebLogic, Oracle BPM Suite Java API, ICEFaces, JPA, SOAP based Web Service Client, Spring ORM, EJB, Service-Based Architecture, JMS, SSO and LDAP Integration, SVN, MAVEN, Eclipse, WinSCP, Putty, mRemoteNG, MS-Visio, Oracle DB, DB Visualizer, HP-QC, Caliber RM, iRise and Hudson.

Responsibilities:

- As part of Technical Lead / Onsite-Coordinator activities:
 - Understand Software Requirement Specifications (SRS) and clarify requirements with the FedEx Business Analyst Team.
 - Estimate implementation effort for the project.
 - Prepare and review Detailed/Low-Level Design as per project requirements.
 - Coordinate with Offshore Development and Testing Teams.
 - Sprint Delivery Activities:
 - Coding, Code-Review (using Fisheye), Functional Review.
 - Test-Case Preparation and Execution, Testing.
 - Build Promotion and assist Testing Team on Functionality Validations.
 - Provide Daily Status Reporting and prepare/present Sprint Demo to the customer.
 - Provide UAT Support.
- As part of Technical Lead / Sprint Lead activities at Offshore:
 - Understand Software Requirement Specifications (SRS) and estimate implementation effort for offshore tasks.
 - Prepare and review Detailed Design.

- Sprint Delivery Activities:
 - Coding, Code-Review, and Functional Review.
 - Handle/manage 14-16 Members.
 - Provide Daily Status Reporting and communicate with Onsite Lead/Manager.
 - Interact with the Customer and provide UAT Support.
- Quality Management:
 - Ensure code quality using tools like Fisheye, PMD, and JUnit.
 - Conduct internal audits with Syntel QA Team.

4. Maintenance / Enhancement Project in DTNA Warranty Services Area (Nov 2010 - Mar 2013):

Technologies/Skills Used: Java/J2EE, DB2, RAD with RTC, WebSphere Application Server, SOAP based Web Service Client, Clear Case, Clear Quest.

Responsibilities:

- Day-to-day customer interaction and communications for existing applications and process support.
- Coordinate with an offshore team of 3 members, providing internal status reporting.
- Perform requirement analysis and provide estimation for enhancement requests.
- Project enhancement and support activities:
 - Defect fixing, estimating changes, preparing Low-Level Design (including Flow, Sequence, and Class Diagrams) and conducting design reviews.
 - Coding, code-review, functional review, and preparing deployment packages.
 - Participate in deployment activities in DEV/Test levels and provide UAT support.
- Participate in DB maintenance activities:
 - Creating/updating DB structures, including DB Partitioning, rebuilding indexes, and performing DB integrity checks.
 - Create and maintain Stored Procedures.

5. Development Project in Daimler AG Procurement and Inventory Area (Jun 2009 - Oct 2010):

Technologies/Skills Used: Java/J2EE, DB2, RAD, WebSphere App Server, IBM Process Server, Dimensions.

Responsibilities:

- Customer Interaction (via Phone Calls and Lotus Notes meetings) for requirement clarifications.
- Requirement analysis and preparation of Technical Specification documents, including estimation for the assigned functionalities.
- Project development activities:
 - Impact analysis, coding, code-review, functional review, and UAT support.
- Participate in DB maintenance activities:
 - Creating/updating DB structures, including DB partitioning, rebuilding indexes, and performing DB integrity checks.
 - Create and maintain stored procedures.
- Quality management for the project:
 - Use JUnit for code quality.
 - Be part of internal audits with the Syntel QA team.
 - Write test cases and execute test scenarios.

6. Maintenance / Enhancement Project in Daimler AG Procurement and Inventory Area (May 2008 – May 2009):

Technologies/Skills Used: Java/J2EE, DB2, RAD, WebSphere Application Server, Dimensions.

Responsibilities:

- Customer interaction along with day-to-day defect fixing.
- Coordinate with an Offshore team of 4 members, providing internal status reporting.

- Requirement analysis and preparation of Requirement and Technical Specification documents, including estimation for the Change Requests.
- Review Requirement and Technical Specification documents with Customer Business and IT teams.
- Project enhancement and support activities:
 - Defect fixing, estimating changes, coding, code review, functional review, and providing UAT support.
- Participate in DB maintenance activities:
 - Creating/updating DB structures, including DB partitioning, rebuilding indexes, and performing DB integrity checks.
 - Create and maintain stored procedures.

7. Maintenance / Enhancement Projects in Daimler-Chrysler Procurement and Inventory Area (Oct 2005 – May 2008):

Technologies/Skills Used: Java/J2EE, DB2, RAD, WebSphere Application Server, PVCS.

Responsibilities:

- Day-to-day defect fixing and coding/implementing change requests.
- Prepare impact analysis and unit test plan documents.
- Perform unit testing and prepare unit test results.
- Write test cases and execute test scenarios.
- Involve in internal QA audits for the project.

Education:

<u>Title of Degree</u>	<u>College / University</u>	<u>Year of Passing</u>
Master in Computer Application (MCA)	KIIT, Bhubaneswar / BPUT, Orissa, India.	2004
