SUMMARY

- Over 24+ years of progressive and diversified experience as an IT Architect/Engineer.
- Well versed in all phases of software development including design and architecture of distributed/web based/multi-tier highly scalable, secure, transactional and high performant systems.
- Established history of innovative mindset, critical thinking, technical leadership leveraging open source as well as proprietary frameworks.
- Collaboration with stakeholders across all levels, skilled at working to build consensus and create solutions that satisfy requirements and fit organizational culture.
- Contributor to design, development, deployment, and integration of large-scale enterprise applications in mobile, e-commerce, websites
- Working knowledge of the security and business domains in Finance, Retail, Banking, Healthcare and Hospitality industry
- Experienced with wide range of hardware and software development environments, including but not limited to JAVA, J2EE, SOA, WS - (SOAP/REST/MICROSERVICES), HADOOP ecosystem, Linux, RDBMS, NOSQL, Kafka, Docker/Kubernetes, AWS, Azure, Snowflake. Knowledge of Generative AI technologies.
- Experience with event oriented and streaming systems, data and analytics architectures, modeling, governance as well as big data stack.
- Experience with contract-first containerized microservices design with five-9s reliability, availability and soft fail design.
- Experience with deployments and dev-ops processes in cloud as well as virtual machines and bare metal
- Proven practice using Waterfall, Iterative and Agile methodologies (SCRUM) in implementing major projects.
- Great problem-solving, decision making, communication, presentation, interpersonal, team work, persuasion and continuous learning skills
- Well-organized and ability to multi-task
- Passion for success and goal-oriented demeanor
- 100% hands-on

SKILLS

Technologies	Design/Development: Java, J2EE, JSP, Servlets, JDBC, JNDI, LDAP, Struts, Hibernate, Spring, Spring-Boot, UML, DB Modelling, NoSql Modelling, SOAP/REST using JAX-RS/JAX-WS and Jersey, Apache CXF, Microservices using Spring-Boot, Docker, Swarm, Kubernetes, Mockito, Groovy, EasyMock, Spock Framework, Oracle, DB2, MySQL, PL/SQL, Cassandra, MongoDB, Redis, MQ Series, HornetQ, RabbitMQ, Apache Kafka, Big data concepts, Hadoop, Pig, Hive, Map Reduce, Spark, R, Sqoop, D3Js, Zeppaline, Ant, Maven, Gradle, UNIX Shell Scripts, Python Script, Jmap, VisualVM, JProfiler, Sonar, EclEmma, Javascript, ExtJS, jQuery, DOJO, Mootools, Microservices, Docker, Kubernetes, Istio, Junit, Maven, Elastic Search Vendor Ecosystem: SAP, CommerceTool, Stibo MDM, Vertex tax Engine, Payment.js and firstdata payeezy API, Doordash/UberEats API's, NCR store/cloud product suite-RPOS/CAT/KPS/AMS/BSL Services/TDM Services, Auth 0, Martech stacks - Mastercard SessionM Loyalty Platform, Segment – Customer 360, Lytics – Insights and Analytics,
--------------	---

	Iterable – Marketing Messaging platform – Email/Push, Retail Media Network using CitrusAd, FreshAI, Bynder DAM and CDN, Checkmate, EDMCS, Crunchtime, QuickServe, CDP platforms - Braze, Punch loyalty platform Dev/Ops: GIT/BitBucket, GITLAB, Jenkins, ansible, rundeck, Codefresh, pulumi, github, ECR, Jfrog artifactory, Nagios, New Relic, Datadog Cloud: AWS, Azure, GCP
Tools	RAD, RSA, Eclipse, WSAD, Rational Rose, Clearcase, ClearQuest, MS Visio, TOAD, Splunk, SoapUI, PuTTY, Alfresco, Subversion, CVS, GIT/BitBucket, GITLAB, JIRA, Confluence, Squirrel SQL Client, DbVisualizer, WinScp, RStudio, Hortonwork's Sandbox, Teradata SQL Assistant, TIBCO Randzevous, Streambase, IBM SOA-BPM, BPEL, ILOG-Jrules, JIRA, Confluence, Lucid Charts, Draw.io, IntelliJ
Servers	JBoss, Tomcat, Oracle Application Server, Sun ONE Application, WebLogic, Websphere, IBM Process Server
Methodologies	Agile, Waterfall, RUP, SAFE Agile

EDUCATION

Bachelors in Computer Engineering, Mumbai University, India

CERTIFICATIONS & TRAINING

- AWS Certified Solution Architect (SAA-CO3)
- Oracle Certified Java Programmer
- Oracle Certified Enterprise Architect
- Six Sigma Green Belt and Black Belt Certified
- Training: ILOG JRules Design and Development, IBM SOA-BPM and Process Server

EXPERIENCE

Big Brand QSR (Remote)

October 2024 – TILL DATE

BDR Initiative – Enterprise Solution Architect

Responsibilities:

- Led discovery/research/reverse engineering efforts of legacy applications around MDM requirements, resulting in a comprehensive understanding that streamlined the design and implementation process.
- Designed a scalable, cost-effective solution using event-driven architecture and API-first approach, successfully integrating with digital channels, NCR POS, FreshAI, and other services, which improved site, product catalog, and menu management efficiency across North America and International markets.
- Identified risks and developed mitigation strategies, ensuring security, compliance, and data privacy, which significantly reduced potential vulnerabilities and enhanced system reliability.
- Designed the integration platform using GCP cloud serverless capabilities
- Directed development teams to implement the solution on GCP cloud, achieving efficient deployment, high performance, and reduced operational costs.
- Implemented security best practices and ensured compliance with industry standards, enhancing the overall security posture and trustworthiness of the solution.
- Mentored junior architects and developers, improving team skills and knowledge, which resulted in higher productivity and better quality of work.
- Worked with QA teams to establish testing strategies and ensure quality standards, resulting in a robust and reliable final solution that met all requirements.
- Managed SAAS vendor relationships and defined integration patterns for third-party integrations,

ensuring seamless integration and optimal performance, which contributed to very scalable design

Environment:

Java, Spring, Dynatrace, GCP - cloud storage, cloud run function, GCP PUB/SUB, Python, PostgreSQL, Snaplogic
CDC/DMS, ETL

Digital Channels - Website, Mobile App, Kiosks

SAAS Vendor Platform: NCR POS, FreshAI, Bynder DAM and CDN, Checkmate, EDMCS, Crunchtime, QuickServe, CDP
platforms - Braze, Punch loyalty platform

Discover Financial, Riverwoods, IL

April 2024 – October 2024

Hydra2 AST Migration - Enterprise Architect

Responsibilities:

- Led the architectural design and transformation of payment processing systems for Discover Financials credit card payment network, gateway integration, and merchant services.
- Worked closely with business stakeholders and product teams to align the payment processing platform with strategic goals, enabling the launch of new products and services, such as real-time transaction authorization and payment processing.
- Provided technical leadership and mentorship to development teams, ensuring adherence to best practices, coding standards, and architectural principles.
- Designed and implemented a microservices-based architecture to modernize Discover's legacy payment processing systems, replacing the H2 AST platform
- Ensured compliance with regulatory standards (PCI-DSS, GDPR) and internal security protocols, while continuously evolving the architecture.
- Directed performance optimization and capacity planning efforts to support high-volume payment traffic, improving Discover's transaction network for millions of customers.
- Defined enterprise-level architectural standards and strategies for integrating Discover's payment systems with merchant networks, ensuring seamless, secure, and compliant transactions.
- Delivered thought leadership through presentations, architecture documentation, and strategic roadmaps to senior leadership and key stakeholders.

Environment:

Java, SpringBoot, RabbitMQ, Tomcat, Caching framework, Microservices, Splunk

Wawa, Media, PA (Remote)

May 2021 – March 2024

Wawa Digital Enterprise/Solution Architecture – Sr. Technical Architect

Responsibilities:

- Focused on Wawa's digital transformation initiative by delivering rapid innovation
- Refine Functional requirements for Wawa Digital program along with stakeholders and translate those into resilient architectures/designs
- Created strategies and transition plans to deliver target state architectures
- Architecture and design of cloud architecture models based on AWS Well Architected framework to deliver sustainable, secure, resilient, high performing and cost optimized solutions
- Vendor platform assessment/selection for various functional and nonfunctional requirements
- Lead solution/technical architecture for various features on various wawa digital channels such as Wawa web/catering/kiosk/mobile on customer, product, menus, order pay, loyalty domain, cart and checkout some of the major areas are

- System analysis and integration for various vendor products Stibo MDM, NCR POS/AMS/CAT/KPS for products, catalog, order injection, loyalty and promotions for digital and restaurant ecosystem. As part of this unravel the complex system interactions, data models, data storage, integration patterns to provide optimal end to end solutions.
- New digital sales channels with modern microservices platforms using API first approach, event driven architecture
 - Enabling web ordering platform capabilities
 - Enabling Kiosk channel for Wawa stores using modern technologies - microservices, Mongo Atlas and Electron app
 - Order injection into store systems, Kitchen management system using NCR's BSL cloud services for digital ordering
- Event driven cart and checkout with microservices
- System analysis and integration for Martech stack integration for Customer 360, analytics, loyalty and customer engagement using Segment, Lytics, SessionM Mastercard and Iterable
 - Replacement and redesign of Wawa's loyalty platform using Mastercard SessionM SAAS platform and enabling it for in-store and digital channels
 - Enabled Fuel loyalty on Wawa's in-store and mobile channels
 - Enabling single use coupon capability for various wawa promotions on in-store, digital channels using NCR AMS SAAS platform
 - Enabling tobacco loyalty on Wawa's in-store and digital channels with Altria integration
- Enabling retail media network with advertising platforms on Wawa's onsite digital channels as well as third party offsite channels
- Analysis, architecture/design of IOT solution for wawa's new bean to batch coffee machines with BUNN vendor integration
- POC/Designs to help flush out reference architecture as and when needed
- Practicing usage of architectural patterns, frameworks, design/cloud patterns in various initiatives
- Collaborate with cross functional teams and multiple SAAS vendors to deliver complex features across multiple systems
- Review architecture designs with tech leads in the firm as well as senior business partners
- POC's for Generative AI usecases for product recommendations, code generation with AWS toolsets like AWS bedrock, Aws Code whisperer. Knowledge of prompt engineering, foundational models, tuning, RAG.
- Recommending technologies and tools that improve the efficiency and quality of design and development processes
- Demonstrated proficiency in end-to-end process and system analysis/design, cloud migration, data architecture, scalable solutions
- Governance with standards/reference architecture/templates, TRM/ARB processes

Environment:

Domain Driven Design, Event driven Architecture, API first Approach

Java 17, Microservices, Spring-Boot, Docker, Kubernetes, Istio, Junit, Maven, Elastic Search, Mongo Atlas, GO
CI/CD pipeline - Codefresh, pulumi, github

AWS services - EC2, S3, SNS, EKS, MSK, KMS, AWS VPC, AWS CLI, AWS RDS, Networking, AWS Security and IAM, Cloudwatch, X-ray, DataDog, Bedrock, Code whisperer

Vendor Ecosystem System Analysis for Integration - SAP, CommerceTool, Stibo MDM, Vertex tax Engine, Payment.js and firstdata, NCR store/cloud product suite-RPOS/CAT/KPS/AMS, Auth 0, Mastercard SessionM Loyalty Platform, CitrusAd Retail Media Network

Renaissance Risk – Sr. Architect

Responsibilities:

- Technical product owner for defining Architectural requirements for Renaissance Risk Platform Team
- Lead development of solution architecture on Renaissance Risk Platform core team & on Renaissance Risk functional teams
- Drive various enterprise level architecture initiatives covering Risk Platform interactions at enterprise level and help flush out reference architecture with POC/Designs.
- Solicit business and technical requirements. Translate those into flexible, scalable, resilient design proposals.
- Review architecture proposals with tech leads in the firm as well as senior business partners.
- Collaborate with others to deliver complex projects which may involve multiple systems.
- Analyze, document, refine, and govern architectures that are developed.
- Create strategies and transition plans to deliver target state architectures.
- Recommending technologies and tools that improve the efficiency and quality of OCC's systems and development processes.

Environment:

Java 8+, canonical data modelling, microservices using Spring-Boot, Docker, Kubernetes, Apache Kafka, Tomcat, Junit, Mockito, Maven, Node, Elastic Search, GIT, CI/CD pipeline – Jenkins, harness, rancher, AWS services like EC2, RDS, S3, ElastiCache, KMS, AWS CLI, Networking, AWS Security and IAM, Okta security

OptumRx, Schaumburg, IL

Dec 2019 – May 2020

Optum Perks - Lead / Architect

Responsibilities:

- Define the application/platform architecture for optum perks mobile and portal application
- Technical design for solutions, POCs and prototypes
- Guide the solution and development through SDLC
- Working with stakeholders to co-ordinate with multiple development teams, enterprise architecture, product owners, QA team, performance teams for Optum Perks development
- Design and development of java/spring-boot based microservice backend and integrate it successfully with third party frontend
- Containerization using docker
- Hybrid deployment on Azure AKS, deploying services behind Azure APIM
- Data movement through CDC on data center data sources using Kafka, Mirror Maker as backbone

Environment:

Java 8+, Microservices using Spring-Boot, Docker, Kubernetes, Apache Kafka, Tomcat, Junit, Mockito, Maven, Node, Elastic Search, GIT/BitBucket, CI/CD pipeline – Jenkins, ansible, Hybrid deployments in Azure

Hyatt Hotels Corporation, Chicago, IL
Enterprise Architecture – Sr. IT Architect

April 2017 – Dec 2019

Responsibilities:

- Design and development of java/spring-boot based microservices framework
- Mastered Docker containerized microservice development and deployment
- Practiced Docker cluster orchestration initiative (Swarm, Kubernetes)
- Proof of concept for dockerizing legacy jboss applications
- Define the application and platform architecture and technical design for solutions, design POCs and prototypes and guide the solution through SDLC
- Productized dockerized redis master/slave/sentinel setup for modernizing and increasing scalability of hotel reserve system
- Design and analysis of PII Vault system for GDPR compliance
- Analysis and design of PMS integration platform across hotel chains with no changes in existing hyatt systems
- Participated in company policies for reference documentation for teams
- Participated in cross business architecture review process to facilitate cross silo communication and review

Environment:

Java 8+, Microservices using Spring-Boot, Docker, Swarm, Kubernetes, Apache Kafka, Tomcat, Jboss, Junit, Mockito, EasyMock, Gradle, Elastic Search, MongoDB, Redis master/slave/sentinel, GIT/BitBucket, CI/CD pipeline – Jenkins, ansible, Rundeck, Jfrog artifactory, Groovy, Hybrid deployments in DC as well as on AWS

W. W. Grainger Inc, Chicago, IL

August 2014 – April 2017

Midtier - Architect/ Tech Lead/Engineer

Designed and developed SOA platform called Midtier for various services like pricing, availability, credit card authorization etc. based on SOAP/REST micro services architecture. Midtier as the name suggests really being consumed by various other applications like Grainger.com, mWeb, salesforce for their product, pricing, availability information providing the common centralized platform for all information. Also working on business insight platform for inventory/open inventory data, clickstream data, SRG product recommendation engine, frequently purchased items using big data hadoop technologies.

Few usecases productionalized on aws cloud infrastructure. Some of these midtier services are migrated later stage to aws cloud with usage of various aws services like Route 53, ELB, EC2, DynamoDB. Data integration from data lake to postgres for PIM and CIM using S3, SNS, SQS, Lambda, DynamoDB, cloudwatch.

Responsibilities:

- Worked on project life cycle from requirements through design, implementation, and support to ensure implementation of appropriate technology in every stage.
- Served as a subject matter expert for architectural frameworks, methods and tools, serve as coach to advise and assist other team members in any architecture disciplines.
- Evaluation of technologies and determine strengths and weaknesses of technology architecture implementation and suitability by doing POC's and recommending technologies (Currently working on POC for spinning hadoop cluster using Amazon EC2)
- Datalake usecase using aws, S3, SNS, SQS
- Providing the Functional and performance improvement suggestions
- Designing and development of Canada and Mexico pricing services, caching layer using Infinispan for storing various pricing and discount data. Designed and developed analytics platform for inventory/open inventory

data using hadoop/hive, data ingestion layer using hadoop, sqoop for various data extracts. Helped data scientist to build ML automation layer for various R Scripts

- Implemented the Unit test cases for web services using EasyMock.
- Involved in Design Reviews, code Reviews, Load testing, Performance tuning.
- Participated in Architecture Review meetings helped in resolving architectural issues and developed performance benchmarks. Product Support during and after go live.
- Coordinating team logistics with various external teams, QA teams, project management

Environment: Java, Scala, Spring Framework, SOA using REST and SOAP Webservices, Micro services using Spring cloud, Hornetq, JAX-WS, Axis, infinispn cache, Jboss, Junit, EasyMock, Maven, JSON, Log4j, Xstream, GITHUB, JavaScript, AJAX, XML, Solr, HornetQ, jQuery, Jenkins, Cassandra, Hadoop/HCatalog/Hive/Sqoop/R/Spark, AWS

Sears Holdings Corporation, Hoffman Estates, IL

UPAS (Universal Price Adjustment Service) - Architect/ Tech Lead [July 2012 – July 2014]

Case Management - Architect/ Tech Lead [July 2011 – June 2012]

Sears Home Services - Architect/Tech Lead [December 2009 – September 2010]

ServiceLive - Lead J2EE Engineer [August 2007 – March 2008]

Having worked with Sears on multiple occasions on different projects, last being on UPAS (universal Price Adjustment Service), helped them to build the complex pricing engine which acts as backbone for various sears systems today including in store, online(sears.com, kmart.com), mobile commerce platform (iPad/iPod). UPAS is SOA platform with micro services using REST/SOAP based services for pricing and promotions. Other services include checkout, order management and service abstraction layer API Gateway.

Responsibilities:

- Complete project life cycle from requirements through design, development, implementation, and support to ensure implementation of appropriate technology in every stage
- Subject matter expert for architectural frameworks, methods and tools
- Serve as coach to advise and assist other team members in any architecture disciplines
- Evaluation of technologies, determine strengths and weaknesses of technologies, recommended technologies, preparing solution architecture artifacts
- Work with business analyst, product managers to understand the requirements and convert those into technical solutions
- Help business analysts/scrum master to break the technical problem/design into workable stories
- Design application framework, coding standards and help team members with the design for their stories
- Design and development of pricer rules engine, integration with other external services like cso, SYWR redemption. Designed webservice security layer, infinispn caching layer, encryption strategy for customer data involved
- Work to complete the sprint commitments, Code review of team members
- Co-ordinate with release managers, QA leads, performance team to explain changes coming up and benchmark expected
- Work with product managers and business users for product release including demo/presentation of new features
- Working with distributed teams and Onsite-offshore co-ordination experience
- Product support needed during and after deployment
- Promote the architecture, processes, ongoing results achieved to upper management and stakeholders. Coordinating team logistics with various external teams, project management.

Environment: Java, Spring Framework, Spring AOP, SOA using REST/SOAP Web services, Spring MVC, Spring Test, JAX-RPC, Apache Kafka, Axis, infinispn cache, Memcached, Tomcat, Junit, Mockito, Drools, Drools Guvnor, Maven, JSON, Log4j, Xstream, jackson-mapper, SVN, JavaScript, AJAX, XML, jQuery, web services, web scalability techniques, Jenkins, Cassandra, MongoDB, Solr Search Engine, Alfresco CMS, Apache CXF

Chicago Mercantile Exchange, Chicago, IL

October 2010 – July 2011

ePRS

- PRS GLOBEX Migration Phase 2 - Lead J2EE Engineer

Helped CME to migrate PRS application from Tandem to J2EE platform

Responsibilities:

- Designing and development of complex event processing using Streambase for Globex Volume Processing, creation and transmission of MDDS volume data messages in FIX format via TIBCO bus
- Created design artifacts such as class diagrams, sequence diagrams for critical modules.
- Designing and development of Contract State Refresh ePRS web application for creation and Transmission of contract refresh messages, predefined spread messages to MDDS.
- Involved in database schema design and performance implications
- Implemented iBatis ORM based data access Framework for getting time and sales data.
- Involved in Design Reviews, code Reviews, Load testing, Performance tuning, profiling of applications using open source profilers.
- Help troubleshoot production issues and provide solutions

Environment: Java, JSP, JQuery, AJAX, XML, J2EE, Oracle, Spring Framework, iBatis, JBoss, Eclipse, Streambase, Jersey Framework, TIBCO Rendezvous, SQL, JDBC, Clearcase, Jenkins, Junit/Mockito, Java Profilers, Linux/Unix

Blue Cross Blue Shield Association, Chicago, IL

March 2008 – December 2009

Blue

Squared - Lead J2EE Engineer

Blue² is web-based messaging system to facilitate Inter-Plan business processes in real-time among all Blue plans.

Responsibilities:

- Complete project life cycle from requirements through design, development, implementation
- Developed different types of messages and various functionalities for interplan communication using SOAP Over JMS
- Analysis and development of plan integration, ECM web services using JAX-WS
- Design UML diagrams like class diagram, sequence diagram for various modules using UML tools for system design and documentation artifacts
- Developed application communication through asynchronous message using JMS, MQ, MDB process message in point-to-point scenarios and XML/XSLT/XSD for schema definitions.
- Research and development activities and execute proof of concept projects

Environment: JAVA, XML, HTML/XHTML, JavaScript, AJAX, CSS, J2EE, JQuery, EJB, JMS, SDO, XSD, Web services, DB2, Mootools, RAD, Spring Framework, Websphere, UML, Ant, Struts, Jenkins, Clearcase, DBVisualiser, ClearQuest, Requisite Pro, Wicket Framework, Junit/Jmock

Bank Of America, Chicago, IL

Nov 2006 – August 2007

AML

KYC - Lead J2EE Engineer

KYC application is automation of AML process used to capture customer data and access the risk associated with the customer.

Responsibilities:

- Involved in analysis and development of admin tool and entitlement solution for user administration. Used ILOG JRules for dynamic form generation.
- Closely worked with Architect team to finalize and POC various technical and functional solutions needed in the project. Implementation of AppFuse Framework.
- Involved in web service integration with various other systems like CED MW, RSE, LDAP, KYC Services, Code pick list services etc. Developed core java libraries to be used by other components.
- Prototyped the SOA-BPM implementation for AML workflow, created design artifacts.

Environment: Java, JSP, J2EE, DB2, JavaScript, AJAX, XML, Spring Framework, Hibernate, Acegi Security, AppFuse, Websphere Application Server, Hudson, RAD, UML, Toad, Clearcase, Web services using JAX-WS, JUnit/Mockito

Prior Experience

- Sr. Analyst/Tech Lead At GE Consumer Finance - Partnership Marketing Group, Schaumburg, IL [May 2004 – Nov 2006]
- Sr. Analyst/Tech Lead At GE Consumer Finance - Wealth Income Management, Richmond, VA [Mar 2003 – Oct 2004]
- Sr. Analyst/Tech Lead At GE Financial Assurance, Stamford, CT [Jan 2001 – Feb 2003]
- System Analyst/Developer At Indigo Architect Inc, Mumbai, India [Jun 2000 – Dec 2000]
- System Analyst/Developer At BSEL Information Systems Ltd, Mumbai, India [Aug 1999 – Jun 2000]
