PROFESSIONAL SUMMARY

Results-driven **Software Developer** with **9+ years of experience** in designing, developing, and deploying scalable enterprise applications using **Java/J2EE, Spring Boot, Microservices, and modern front-end frameworks**. Adept at implementing **cloud-native architectures** on **AWS**, integrating DevSecOps best practices, and delivering high-quality, secure, and performance-optimized solutions. Strong expertise in **React/Angular, CI/CD automation, and API development**, with hands-on experience in **microservice migration, containerization, and cloud integration**.

PROFESSIONAL EXPERIENCE HIGHLIGHTS

- **Architected and developed scalable RESTful microservices** using **Spring Boot, Spring Cloud, and Java 17**, ensuring resilience and scalability across distributed systems.
- **Migrated legacy monolithic applications to microservices**, improving deployment speed, modularity, and fault isolation.
- **Built responsive and modern front-end applications** using **React.js** and **Angular 16**, implementing reusable components and integrating with RESTful backends.
- **Implemented secure authentication/authorization** using **Spring Security, OAuth2, and JWT**, aligning with enterprise security standards.
- **Developed and optimized API performance** using **asynchronous processing**, caching with **Redis**, and connection pooling strategies.
- **Integrated AWS services (Lambda, S3, EC2, CloudWatch)** to build cloud-native solutions supporting high availability and observability.
- **Implemented DevSecOps pipelines** using **Jenkins, SonarQube, Fortify, Trivy, and Docker image scanning**, ensuring continuous delivery with embedded security checks.
- **Worked with Apache Kafka and RabbitMQ** for asynchronous, event-driven microservices communication and real-time data processing.
- **Engineered data pipelines using Apache Spark and Cassandra**, achieving high throughput for large-scale data ingestion and transformation.
- **Developed and maintained CI/CD pipelines** reducing deployment effort and increasing release frequency.
- **Applied TDD/BDD practices** with **JUnit, Mockito, and Cucumber**, achieving high test coverage and reducing production defects.
- **Created and maintained API documentation** using **Swagger/OpenAPI**, enhancing cross-team collaboration and onboarding.
- **Collaborated in Agile/Scrum teams**, participating in sprint planning, code reviews, retrospectives, and release planning to ensure timely feature delivery.
- Experience Developing and Deploying Enterprise Java Beans on Application Servers like WebLogic, WebSphere and JBoss.
- Worked on **RDBMS** systems including **Oracle, PostgreSQL, MySQL, and MSSQL**.
- **Utilized LaunchDarkly** for controlled feature rollouts and **Splunk** for monitoring, alerting, and log analysis across distributed environments.

TECHNICAL SKILLS

Languages	Java 11/17, Python 3.8, Kotlin, SQL, PL/SQL, TypeScript, JavaScript (ES6+), C++
J2EE Technologies	J2EE, Servlets, JSP, JDBC, RESTful APIs, Microservices, Spring Core, Spring MVC, Spring Boot, Spring Cloud, Hibernate, JPA
Frameworks	Spring Boot 6.2, Spring MVC, Hibernate, JPA, Struts
Frontend Technologies	React.js, Angular (5–18), TypeScript, HTML5, CSS3, Bootstrap, Angular Material, Node.js
Cloud& DevOps	AWS (Lambda, EC2, S3, ECS, CloudWatch, RDS), Docker, Jenkins, Git, GitLab CI/CD, SonarQube, Fortify, Trivy, Maven, Gradle
Databases	Oracle, MySQL, PostgreSQL, Cassandra, Redis, MongoDB
Monitoring/Feature Flags	Splunk, ELK Stack, LaunchDarkly, SignalFX
Tools	IntelliJ IDEA, Eclipse, VS Code, JIRA, Bitbucket, GitHub Actions

Testing	JUnit5, Mockito, TestNG, Cucumber (BDD/TDD), Jasmine, Karma
Messaging & APIs	Apache Kafka, RabbitMQ, REST, SOAP, Swagger/OpenAPI

PROFESSIONAL EXPERIENCE

Client: FannieMae, TX | Senior Software Developer | Oct 2022– Present

Responsibilities:

- Designed and developed **RESTful APIs and microservices** using **Java 11/17, Spring Boot, and Spring Cloud** for financial transaction processing.
- Leveraged **AWS EC2, Lambda, S3, and CloudWatch** for deployment automation, monitoring, and serverless data processing.
- Built AWS Lambda functions with Python and S3 integration to automate email ingestion and data storage workflows.
- Created **CloudWatch alarms and metrics dashboards** to monitor API latency and trigger real-time alerts.
- Implemented centralized **application logging and monitoring** via **Splunk dashboards** for proactive performance analysis.
- Built and integrated **Angular 13** components (dashboards, forms, modals) with Spring Boot APIs to deliver responsive, modular UIs.
- Developed **serverless microservices** using **AWS Lambda (Python 3.8)**, leveraging AWS services for cost efficiency and scalability.
- Automated deployments via **CI/CD pipelines in Jenkins**, managing code promotions across multiple environments.
- Applied **exception handling, logging (Log4j2), and Vault integration** for secure secrets management.
- Enhanced API performance using **Redis caching** and asynchronous data handling.
- Containerized Node.js applications using Docker and orchestrated deployments with Kubernetes, enabling easy scalability across different environments
- Developed the Data Access Object (DAO) layer using Spring MVC and Hibernate to handle efficient database operations, ensuring seamless interaction between Java objects and database tables.
- Collaborated with front-end developers to integrate ColdFusion and Java components with HTML, CSS, and JavaScript.
- Leveraged AI models and GitHub Copilot to implement anomaly detection on telemetry and NLP-based log analysis, proactively identifying system bottlenecks and enabling natural-language queries for real-time system health insights.
- Expertly crafted Oracle PL/SQL queries, procedures, and triggers, optimizing data management and ensuring seamless backend support for applications.
- Leveraged ELK stack for log management and troubleshooting across distributed components.
- Used Web workers to offload heavy calculations to the Web Workers in **Node JS**
- Established a structured procedure for deploying applications onto the Google Cloud Platform (GCP) by leveraging Docker technology. Additionally, developed automation workflows using Jenkins and Spinnaker to facilitate Continuous Integration and Continuous Deployment (CI/CD).
- Written Java Script, HTML, CSS, Servlets, and JSP for designing GUI of the application.
- Conducted **unit and integration testing** using **JUnit5, Test Containers, and Jasmine/Karma** for front-end
- Resolving scalability and performance issues both in Applications as well as in WebLogic Application Server.
- Participated in **Agile Scrum** ceremonies, sprint demos, and retrospectives, contributing to iterative feature delivery.

Environment: Java 11/17, JWT, OAuth 2.0, J2EE, Spring Boot, Jenkins, open-source API, JavaScript, AWS S3, AWS Lambda, Hibernate, AWS CloudWatch, Spring Boot, JUNIT5, Swagger, Oracle DB, Redis, InteeIj, Microservices, Restful APIs, Bitbucket, GitLab.

Client: American Express, AZ | Senior Software Developer | Jan 2022 – Oct 2022

Responsibilities:

Fraud Analysis Platform (Event Driven System) (Java 14, Kotlin, Spring Boot, React, Kafka, & On-Prem/GCP)

- Led improvements in all repositories for the fraud analysis platform including centralized data modal implementation, encryption using custom annotations and data validation.
- Developed a complex React modal component implementing dynamic form rendering and conditional search functionality using React hooks and components.

- Developed the code using Java 11 and the Spring framework with Spring Boot for auto-configuration. Designed and developed Spring beans, components, and REST APIs.
- Architected and implemented authentication for stateless functions for the entire fraud analysis platform.
- Implemented custom annotations for serializing/deserializing sensitive PII data using encryption in custom Jackson modules.
- Designed and implemented stateless functions and API endpoints to search and add customers to the fraud cases.
- Developing asynchronous microservices and integrating them with Couchbase and other NoSQL databases to ensure efficient data management.
- Developed and maintained REST APIs using Spring MVC and transitioned later to Spring Boot.
- Integrated ColdFusion applications with Java EE frameworks such as Spring and Struts.
- Actively contributing to continuous improvement and the development of enterprise messaging systems, utilizing Apache Kafka for distributed messaging and integration.
- Designed the implementation of role-based access management system, which is currently under implementation.
- Designed and built **RESTful** microservices for credit and collection management systems using Spring Boot and **Vert.x**, optimizing for low-latency and high concurrency.
- Built and optimized **Spring Boot microservices** in **Java 11** for payment and fraud detection platforms.
- Developed modern **React.js** and **Angular (14/18)** applications integrated with RESTful APIs for real-time UI updates and analytics dashboards.
- Created **Redux-based global state management** and reactive forms using **RxJS** and **Angular Material**.
- Integrated **Spring Security with OAuth2/JWT** for secure authentication and role-based UI rendering.
- Utilized **Apache Kafka and RabbitMQ** for real-time messaging and event-driven microservices.
- Developed and deployed services on **AWS ECS with Docker**, leveraging **Jenkins shared libraries** for CI/CD automation.
- Implemented **DevSecOps practices** with **SonarQube, GitHub Actions, GitLab CI/CD**, and automated **SAST/DAST scans**.
- Developed **multilingual financial transaction systems** using **JSP, Servlets, and Struts**, ensuring global usability and scalability.
- Integrated **Kafka with ELK Stack** (Elasticsearch, Logstash, Kibana) for log analytics and performance insights.
- Created reusable **React components** and **Angular UI modules** to accelerate delivery cycles and improve code maintainability.
- Built Vert.x-based message gateways to interface between legacy Java systems and modern REST-based microservices.
- Led knowledge-sharing sessions on Vert.x and reactive programming patterns for internal teams.
- Automated testing and CI/CD pipelines with unit/integration test coverage up to 95%, ensuring reliable deployments and enforcing high engineering quality standards.
- Assisted in deployment on WebLogic servers, ensuring smooth rollouts of ERP updates and patch releases.
- Collaborated with product owners to refine requirements and acceptance criteria in **Agile sprints**.

Environment: Java, J2EE, HTML, JSP, Spring, ReactJS, Redux, Kafka, Opensource API, Microservices, Swagger, Spring Security, JWT, OAuth 2.0, Web Services, Hibernate, Spring Boot, Docker, JUNIT, AWS ECS, RabbitMQ, PostgreSQL, Axios, SonarQube, Jenkins, PgAdmin4, IntelliJ.

Client: Charter Communications, MO | **Application Developer** | Jan 2020 – Dec 2021

Responsibilities:

- Designed and implemented **microservices** and RESTful endpoints using **Spring Boot and Spring Core annotations**.
- Migrated monolithic applications to **microservices**, improving scalability and reducing latency.
- Developed **Angular 5 components** and reactive UIs integrated with RESTful services.
- Created and maintained **Swagger/OpenAPI documentation** for REST endpoints.
- Created RFP (Request for Proposal) microservice to provide RESTful API utilizing Spring boot with Spring MVC.
- Built reusable **wrapper classes** for customer interaction services and SQL persistence.
- Used **RabbitMQ** for messaging and **Akana API management** for enterprise API governance.
- Automated deployments through **Jenkins** and version control with **Bitbucket**.
- Achieved **90% unit test coverage** using JUnit and integration testing frameworks.

- Used **Splunk** for monitoring, alerting, and production troubleshooting.
- Architected a hybrid microservices ecosystem, leveraging **Java/Spring Boot** for robust, enterprise-grade services and Node.js for high-performance, non-blocking APIs and gateways, all interconnected through event-driven messaging systems like **Kafka**.
- Constructed a comprehensive CI/CD pipeline by harnessing the power of Jenkins automation and GitHub repositories, utilizing the webhooks plugin to streamline the development process.
- Managed database solutions using MySQL, encompassing schema design, SQL querying, and stored procedures with PL/SQL.
- Experience in designing and implementing the WebLogic application configuration management system based on WebLogic Scripting Tool WLST and UNIX Shell Scripting.
- Participated in **on-call rotations** to ensure high system availability and quick issue resolution.

Environment: Java, J2EE, HTML, JSP, Spring, JavaScript, Opensource API, Microservices, Swagger, Spring Security, JWT, OAuth 2.0, Web Services, Hibernate, Spring Boot, JUNIT, RabbitMQ, SonarQube, Jenkins, OracleDb, IntelliJ.

Client: WarnerMedia, NY | Java Software Developer | July 2019 – Jan 2020

Responsibilities:

- Migrated legacy web apps to **Angular and Node.js** integrated with AWS REST APIs.
- Built **Spring Boot microservices** and deployed via **Jenkins and Docker**.
- Created responsive UI with **Bootstrap, HTML5, and JavaScript**, ensuring cross-browser compatibility.
- Implemented **JWT-based authentication** for secure access control.
- Automated deployments and backups on **AWS EC2 and S3**.
- Experience in Configuring Servlet Engines, Session Managers including planning installation and configuration of WebLogic Application Servers
- Conducted unit testing with JUnit and Mockito, alongside automation testing with Selenium and Cucumber.
- Implemented load-balancing with Nginx to allow NodeJS instances to handle concurrent users.
- Involved in writing Oracle PL/SQL Stored procedures, triggers, and views. Worked on NoSQL database MongoDB & Performed CRUD operations like Update, Insert & Delete.
- Optimized microservice using NodeJS and ES6 as interfaces to Cassandra NoSQL database.
- Established **Jenkins pipelines** for nightly builds and automated test execution.

Environment: Java, J2EE, HTML, JSP, Spring, JavaScript, AngularJS, Opensource API, Microservices, Swagger, Spring Security, JWT, OAuth 2.0, Web Services, Hibernate, Spring Boot, JUNIT, AWS S3, Bootstrap, Bitbucket, Jenkins, Oracle Db, IntelliJ.

Client: Apple, CA | Java Software Engineer | Oct 2018 – June 2019

Responsibilities:

- Developed **Spring MVC and REST APIs** for order processing and inventory systems.
- Created **Spring Boot microservices** deployed on **AWS EC2** using **Jenkins CI/CD** pipelines.
- Optimized database queries with **Hibernate ORM and Oracle 11g**.
- Migrated data from **Oracle to Cassandra (Datastax)**, introducing NoSQL scalability.
- Built **JSP/JavaScript** front-end modules for internal admin tools.
- Developed PL/SQL packages, functions, and procedures for high-volume data processing.
- Participated in **Agile ceremonies**, contributing to sprint delivery and backlog refinement.

Environment: Java, J2EE, HTML, JSP, Spring, JavaScript, Microservices, Swagger, Spring Security, JWT, Web Services, Hibernate, Spring Boot, JUNIT, GitHub, Jenkins, Oracle Db, Maven, IntelliJ.

Client: Yash Technologies, Hyderabad | System Analyst | Apr 2014 – Dec 2015

Responsibilities:

- Maintained and refactored **legacy Java codebases**, upgrading libraries and dependencies to enhance performance and security.
- Designed and optimized **PL/SQL procedures** and complex **SQL queries** to implement business logic efficiently.
- Provided **production support** and resolved critical application issues within defined **SLA timelines**.
- Enhanced **UI interactivity** and responsiveness using **JavaScript and jQuery** in JSP-based applications.
- Deployed and validated **WAR files on Apache Tomcat servers**, performing comprehensive end-to-end testing.
- Created **user training guides and onboarding documentation** to streamline knowledge transfer and support new team members.

Environment: Java, J2EE, HTML, JSP, Spring, JavaScript, jQuery, Servlets, Struts, Oracle, Microservices, Swagger, Spring Security, JWT, Web Services, Hibernate, Spring Boot, JUNIT, Maven, IntelliJ.

EDUCATION DETAILS

- Masters in Information Technology Management at Campbellsville University, KY | 2017
- Bachelors from JNTU-H, India | 2014
